

Insulation Installation

Installing insulation or additional insulation in an existing dwelling can make a significant difference to the performance of the home. It is important to install installation correctly. This sheet deals with how to install insulation in various types of construction, providing installation tips and typical solutions. This sheet should be read in conjunction with 4.7 Insulation.

Please note that total R-values for roofs, ceilings, walls and floors given in this manual provide only one value for total thermal resistance of construction.

Under the Building Code of Australia (BCA), total R-values of the building fabric vary depending on climate zone and the height above the Australian Height Datum at the location where the building is to be constructed. Ensure you comply with the BCA requirements for energy efficiency of building fabric.

INSTALLATION TIPS

This section demonstrates how to install insulation without compromising its effectiveness.

Thermal bridges

The building frame can act as a thermal bridge, particularly in cold climates, conducting heat and allowing it to bypass otherwise effective insulation. Metal framing is a particular issue because of its high conductivity. The presence of the frame reduces the overall insulation value, as the frame can constitute up to 15 per cent of the wall, ceiling or floor surface. To help overcome the effect of thermal bridging:

- > Foam isolating strips between the metal frame and cladding must be at least 12mm with an R-value of 0.2.
- > Fix bulk insulation, such as foam boards, over the external or internal surface of the frame.

Vapour barriers

Vapour barriers include polythene sheet, reflective foil, foil backed plasterboard and well maintained water resistant painted surfaces. Water resistant insulation, such as foam can also act as a vapour barrier. Tape or glue all joints in vapour barriers to keep out moisture.

Use vapour barriers to protect from condensation:

- > In high humid (tropical) climates,
- > In cool climates where the difference between indoor and outdoor temperature is significant,
- > In roof spaces with a low ventilation rate, for example cathedral or raked ceilings,
- > In situations where high amounts of vapour are generated and not exhausted,
- > On the underside of metal roofing, to minimise the likelihood of condensation and corrosion.

Install vapour barriers on the warm side of the insulation:

- > In cold climates place the vapour barrier on the inside of the insulation (directly above the ceiling lining and next to the internal wall lining).
- > In warm climates place the vapour barrier on the outside of the insulation.

Roof ventilation

Ventilate the roof space where possible to allow built up heat to dissipate. Even in cooler climates a minimal amount of ventilation is desirable to allow built up moisture to escape. Sufficient ventilation is often achieved through the air gaps along the ridge line or between tiles. Gable or eaves vents may also be used.

Ventilated roof spaces in high humid (tropical) climates under metal roofing can result in excessive condensation at night. Condensation dropping off the underside of metal roofing onto the ceiling can be avoided by installing reflective foil insulation similar to that used under roof tiles.

In bushfire prone areas cover any openings with fine stainless steel mesh to prevent embers from entering the roof space. Keep roof spaces weather tight and vermin proof.

Gaps

Avoid gaps in all types of insulation. Even a small gap can greatly reduce the insulating value. Fit batts snugly and don't leave gaps around ducts and pipes. Tape up holes and joints in reflective insulation. Make sure the ends of multi cell and concertina foils are well sealed. Ensure that corners of walls, ceilings and floors are properly insulated as these are areas where heat leaks most often occur.

For safety reasons, minimum clearances must be left around hot objects, such as flues from fires, recessed downlights and their transformers. See 'Health and safety tips' below.

Green Australia Steve Lancaster, 2012 Green Australia A snapshot examines the ways in which Australians are attempting to reduce their ecological footprint both at home and at work In 2009 the CO2 Energy Emissions Index found that Australia had overtaken the USA to become the largest per capita emitter of greenhouse gases in the world a legacy of dependence on coal fired power stations the widespread adoption of conventional farming techniques heavy reliance on vehicles powered by fossil fuel dirty industrial practices and a growing mountain of waste Yet in recent years there has been a growing awareness that climate change is beginning to bite the recent drought and devastating floods suggesting that more extreme weather patterns are likely unless significant steps are taken to combat global warming Using case studies and up to date research this book demonstrates that although much more needs to be done if Australia is to secure a carbon neutral future some Green shoots are beginning to emerge

Smart and Sustainable Built Environments Jay Yang,Peter S. Brandon,Anthony C. Sidwell,2008-04-15 This book brings together a group of international specialists to explore the current state of the art and future potential for encouraging developing and implementing smart and sustainable built environment strategies It covers a broad spectrum of issues ranging from technological advancement through the assessment of past experiences to communication and education requirements and future strategies provides a snapshot of current methods and technologies for developing smart and sustainable built environment strategies over 30 fully refereed chapters from international experts addresses the particular requirements and problems of difference areas and climatic regions Nanotechnology Safety Madhulika Srikanth,Ramazan Asmatulu,2013-06-12 The importance of construction and infrastructures cannot be undermined Buildings roads bridges dams transportation systems and other infrastructures have brought the nations of the world together in many ways and made it a much smaller place This chapter mainly talks about the world s construction industry and the advancement of new materials and technologies in the field of nanotechnology It also discusses the shift toward sustainable development in the construction industry and how this development is applied by construction companies Nanotechnology is pushing construction and infrastructure industries to use more efficient nanomaterials in order to make smarter building structures and infrastructures However the role of various nanomaterials in the construction industry has been debated The widespread trend of using nanomaterials has been discouraged because of the biological and environmental health and safety impacts of using nanomaterials in construction and infrastructures Governmental agencies are currently playing a major role in establishing rules and regulations that govern proper and efficient handling and use of nanomaterials This study provides a look at the current situation and offers suggestions for continuing on our path toward sustainable development in the field

Technology, Design and Process Innovation in the Built Environment Peter Newton,Keith Hampson,Robin Drogemuller,2009-02-09 Buildings and infrastructure represent principal assets of any national economy as well as prime sources of environmental degradation Making them more sustainable represents a key challenge for the construction planning and design industries and governments at all levels and the rapid urbanisation of the 21st century has turned this into a global challenge This book embodies the results of a major research programme by members of the Australia Co operative Research Centre for Construction Innovation and its global partners presented for an international audience of construction researchers senior professionals and advanced students It covers four themes applied to regeneration as well as

to new build and within the overall theme of Innovation Sustainable Materials and Manufactures focusing on building material products their manufacture and assembly and the reduction of their ecological fingerprints the extension of their service lives and their re use and recyclability It also explores the prospects for applying the principles of the assembly line Virtual Design Construction and Management viewed as increasing sustainable development through automation enhanced collaboration such as virtual design teams real time BL performance assessment during design simulation of the construction process life cycle management of project information zero information loss risk minimisation and increased potential for innovation and value adding Integrating Design Construction and Facility Management over the Project Life Cycle by converging ICT design science engineering and sustainability science Integration across spatial scales enabling building infrastructure synergies such as water and energy efficiency Convergences between IT and design and operational processes are also viewed as a key platform increased sustainability

Ecopolis Paul F. Downton, 2008-11-19 From 2008 for the first time in human history half of the world's population now live in cities Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable Paul Downton's *Ecopolis* takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences

101 Rules of Thumb for Low-Energy Architecture Huw Heywood, 2021-08-31

Buildings and construction are a major contributor to the climate and biodiversity emergency They account for nearly 40% of energy related carbon dioxide CO₂ emissions It is more important than ever for architects to design responsibly and create low carbon low energy buildings for a sustainable future 101 Rules of Thumb sets out the essential elements of low energy architecture in a fresh intuitive way Where ever changing technology and complex legislation can cloud the designer's thought process this book equips you with the fundamentals you need to minimise CO₂ emissions design for low energy use and work with not against the forces of nature With reliable simple rules of thumb each page focuses on a single piece of guidance along with a clear hand drawn illustration The emphasis is on passive low energy principles and the rules of thumb cover all the design fundamentals from site and location to orientation and form peppered with ideas to help the designer think outside the box drawing inspiration from traditional methods photoperiodic plants and the black tailed prairie dog An

extended fully updated narrative bibliography explores the sources in detail and provides a valuable springboard for further study Applicable throughout the world in any climate region 101 Rules of Thumb is a global primer to be dipped into at any time as a quick means of re focusing on what s important when designing a new or retrofitted low energy building The rules cover Site and location Orientation and form The low energy building envelope Carbon free heating cooling and lighting Passive low energy principles **The Owner Builder** Leeza Sipek,Hazel Foote,Matthew Sipek,2012-11-15 Building your own home could save you thousands of dollars The Owner Builder is an easy to understand step by step guide for people who want to build their dream home in a financially responsible manner From choosing a block of land to decorating the inside of the house this book guides the reader through the entire building process The authors share their personal experiences with photos of the building process in 68 steps They include tips and hints on the approval process construction ideas and how to avoid mistakes They also uncover potential hidden costs and offer other ways to save money if you don t have time to manage the construction yourself such as hire a project manager which is cheaper than a contract builder Renovators DIY enthusiasts and anyone considering building a home will find a wealth of practical information in this book Even if you are hiring a builder this book can help you understand what is involved in building a home and what to expect at each stage of the project
