Musitelli,Wei Li Chen,2003-09-22 Western Medicine as seen today has a strong scientific basis in its development The pathogenesis of most diseases and their symptomatology and physical signs are well studied and understood The management of patients is based on firm understanding of these disease processes In contrast Traditional Chinese Medicine came about through the experience of many generations of practitioners over thousands of years Undoubtedly many of these treatments have proved to be effective in their own way however firm scientific basis is still lacking While most Western Medicine advocates control of disease by eradication of pathogens and surgical removal of diseased organs as in the case of cancer Traditional Chinese Medicine seeks to improve resistance against disease There is probably a great wealth of therapeutic value in Traditional Chinese Medicine which has not been discovered or explored fully By combining the knowledge of both Western and Traditional Chinese Medicine one might be able to improve the results of efficacy of treatments and the survival of patients The integration of Medicine from East and West will take time to evolve and will need interested physicians from different parts of the world to work closely together to realize such a possibility This book is an attempt to bridge the medical world of two great and ancient civilizations in their approach to the treatment of disease It is informative with a detailed account of the history of medical development It is highly recommended for those medical practitioners from both East and West who are interested to explore alternative medicine and research new areas of the medical frontier [Textbook of Natural Medicine - E-Book](#) Joseph E.
