Transformation of Business Organization Towards Sustainability Jurgis Kazimieras Staniškis, Eglė Staniškienė, Živilė Stankevičiūtė, Asta Daunorienė, Joana Ramanauskaitė, 2022-01-12 We have entered a new era where business technologies, communities, and even pandemic diseases cross borders with unprecedented speed and intensity. 2030 Agenda and 17 SDGs reflect the global community's high expectations of finally reversing the destruction of our natural and social habits and achieving a more balanced and equitable pathway toward well-being of all. However, despite the initial efforts, the world is not on track to achieving the most of the 169 targets that comprise the goals. It is evident that we have a system problem, so we need a system solution. Authors presented a hierarchical system consisting of two-level management systems: first-level unsustainability reduction systems and second-level control system for transformations toward sustainability. The book clearly shows that implementation of systems for unsustainability reduction and for transformations toward sustainability is possible and that sufficient knowledge is available to get started. It is designed for researchers, practitioners, and politicians.

Business, Power and Sustainability in a World of Global Value Chains Stefano Ponte, 2019-08-15 The interaction of sustainability governance and global value chains has crucial implications the world over. When it comes to sustainability, the last decade has witnessed the birth of hybrid forms of governance where business, civil society, and public actors interact at different levels, leading to a focus on concepts of legitimacy within multi-stakeholder initiatives (MSIs). Based in over 15 years of theoretical engagement and field research, *Business Power and Sustainability* draws from both labour-intensive value chains such as in the agro-food sector (coffee, wine, fish, biofuels, palm oil) and from capital-intensive value chains such as in shipping and aviation to discuss how sustainability governance can be best designed, managed, and institutionalized in today's world of global value chains (GVCs). Examining current theoretical and analytical efforts aimed at including sustainability issues in GVC governance theory.

it expands on recent work examining GVC upgrading by introducing the concept of environmental upgrading and through new conceptions of orchestration it provides suggestions for how governments and international organizations can best facilitate the achievement of sustainability goals Essential reading on the governance of sustainability in the twenty first century

Governance and Business Models for Sustainable Capitalism Atle Midttun, 2021-12-20 *Governance and Business Models for Sustainable Capitalism* touches upon many of the central themes of today's debate on business and society In particular it brings attention to a recurrent tension between efficiency innovation and productivity on the one hand and fairness equity and sustainability on the other The book argues that we need radical rethinking of business models and economic governance beyond the classical doctrine which sees social and ecological responsibility as lying with public policy regulation of purely profit seeking firms In spite of the popular CSR agenda business as we know it today is both too transient and too limited in its motivation to carry the regulatory burden We need to adopt a much wider concept of partnered governance where advanced states and pioneering companies work together to raise the social and environmental bar The book suggests that civil engagements based on moral rather than formal rights and amplified through the media may provide a healthy challenge both to autocratic planning and to solely profit centered commercialization The book also proposes a triple cycle theory of innovation for sustainability a novel framing of the efficacy

of green and prosocial entrepreneurship as intertwined with political visions and supportive institutions In addition the book offers reflections on the ways in which further digital robotization may enable transition to an Agora Economy where productive efficiency is combined with expanded civic freedoms Aimed primarily at researchers academics and students in the fields of political economy business and society corporate governance business ethics corporate social responsibility and sustainability the book will additionally be of value to practitioners supplying them with information regarding the challenges associated with the shaping of sustainable or civilised market capitalism for a better world *Reinventing Business*
