**FEDLINK Technical Notes**, 1994      **Software Development Tools** Raymond C. Houghton, 1982      **Applied Computer Science for GGOS Observatories** Alexander N.J. Neidhardt, 2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0      *Object Oriented Methods for Interoperable Scientific and Engineering Computing* Michael E. Henderson, Christopher Radcliff Anderson, Stephen L. Lyons, 1999-01-01 Contains papers presented at the October 1998 SIAM Workshop on Object Oriented Methods for Interoperable Scientific and Engineering Computing that covered a variety of topics and issues related to designing and implementing computational tools for science and engineering      *Library automation in North America* Charles R. Hildreth, 2017-07-24 No detailed description available for Library automation in North America      **Finite Element Analysis of Antennas and Arrays** Jian-Ming Jin, Douglas J. Riley, 2009-02-23 The Most Complete Up to Date Coverage of the Finite Element Analysis and Modeling of Antennas and Arrays Aimed at researchers as well as practical engineers and packed with over 200 illustrations including twenty two color plates Finite Element Analysis of Antennas and Arrays presents Time and frequency domain formulations and mesh truncation techniques Antenna source modeling and parameter calculation Modeling of complex materials and fine geometrical details Analysis and modeling of narrowband and broadband antennas Analysis and modeling of infinite and finite phased array antennas Analysis and modeling of antenna and platform interactions Recognizing the strengths of other numerical methods this book goes beyond the finite element method and covers hybrid techniques that combine the finite element method with the finite difference time domain method the method of moments and the high frequency asymptotic methods to efficiently deal with a variety of complex antenna problems Complemented with numerous examples this cutting edge resource fully demonstrates the power and capabilities of the finite element analysis and its many practical applications      FEDLINK Services Directory for Fiscal Year ..., 1992      *Introduction to Parallel Computing* Wesley P. Petersen, Peter Arbenz, 2004 This is a practical student guide to scientific computing on parallel computers working up from a hardware instruction level to shared memory machines and finally to distributed memory machines      *Numerical*

*Solution of Partial Differential Equations on Parallel Computers* Are Magnus Bruaset, Aslak Tveito, 2006-03-05 Since the dawn of computing the quest for a better understanding of Nature has been a driving force for technological development. Groundbreaking achievements by great scientists have paved the way from the abacus to the supercomputing power of today. When trying to replicate Nature in the computer's silicon test tube there is need for precise and computable process descriptions. The scientific fields of Mathematics and Physics provide a powerful vehicle for such descriptions in terms of Partial Differential Equations (PDEs). Formulated as such equations physical laws can become subject to computational and analytical studies. In the computational setting the equations can be discretized for efficient solution on a computer leading to valuable tools for simulation of natural and man-made processes. Numerical solution of PDE-based mathematical models has been an important research topic over centuries and will remain so for centuries to come. In the context of computer-based simulations the quality of the computed results is directly connected to the model's complexity and the number of data points used for the computations. Therefore computational scientists tend to, even the largest and most powerful computers they can get access to either by increasing the size of the data sets or by introducing new model terms that make the simulations more realistic or a combination of both. Today many important simulation problems can not be solved by one single computer but calls for parallel computing.

**Scientific Computing in Electrical Engineering** Wilhelmus H. Schilders, E. Jan W. ter Maten, Stephan H. M. J. Houben, 2004-08-11 This book presents the proceedings of the 4th International Workshop Scientific Computing in Electrical Engineering held in Eindhoven, The Netherlands from June 23-28, 2002. This workshop followed three earlier workshops held in 1997 at the Darmstadt University of Technology, in 1998 at the Weierstrass Institute for Applied Analysis and Stochastics, and in 2000 at the University of Rostock. The main topics of SCEE 2002 were computational electrodynamics, circuit simulation, and coupled problems. The objective of the workshop, which was mainly directed at mathematicians and electrical engineers, was to bring together scientists from universities and industry with the goal of intensive discussions about modelling and numerical simulation of electronic circuits and electromagnetic fields. A special feature was the Industry Day where distinguished speakers discussed the needs of industry in the field of computational electromagnetics and circuit simulation. The book contains papers of invited and contributed talks as well as from poster presentations.
