Wood Polymer Nanocomposites Md Rezaur Rahman, 2017-09-06. This book shows how chemical modifications influence some properties of wood nanocomposites. It describes suitable and effective chemical modifications that strengthen the physico-mechanical, thermal, and morphological properties of wood. The authors provide intuitive explanation of the various types of chemical modifications applied to polymer cell walls in wood. They emphasize the reaction changes in wood cell walls due to the chemical modifications. Increased mechanical strength, improved thermal stability, as well as the efficient retardancy against fungi attack, are described. This book concludes summarizing the potential applications of wood-based nanocomposites, taking into account sustainability and economic aspects.

Virtual Drug Design Daniela Schuster, Honglin Li, 2020-01-13. In the current drug research environment in academia and industry, cheminformatics and virtual screening methods are well established and integrated tools. Computational tools are used to predict a compound's 3D structure, the 3D structure and function of a pharmacological target, ligand-target interactions, binding energies, and other factors essential for a successful drug. This includes molecular properties such as solubility, logP value, susceptibility to metabolism, cell permeation, blood-brain barrier permeation, interaction with drug transporters, and potential off-target effects. Given that approximately 40 million unique compounds are readily available for purchase, such computational modeling and filtering tools are essential to support the drug discovery and development process. The aim of all these calculations is to focus experimental efforts on the most promising candidates and exclude problematic compounds early in the project.

In this Research Topic on virtual activity predictions, we cover several aspects of this research area, such as historical perspectives, data sources, ligand treatment, virtual screening methods, hit list handling, and filtering.

Proteomic Methods in Neuropsychiatric Research Paul C. Guest, 2017-03-28. Due to continuous technical developments and new insights into the high complexity of neurological diseases, there is an increasing need for the application of proteomic technologies, which can yield potential biomarker readouts for improved clinical management, as well as for the development of new drugs by struggling pharmaceutical companies. This book describes the step-by-step use of proteomic methods, such as two-dimensional gel electrophoresis, multiplex immunoassay, liquid chromatography-mass spectrometry (LC-MS), and selective reaction monitoring (SRM) to increase our understanding of these diseases, with the ultimate aim of improving patient care. The volume will be of high interest to clinical scientists, physicians, and pharmaceutical company scientists, as it gives insights into the latest technologies enabling the revolution of personalized medicine. It is of direct interest to both technical and bench biomarker scientists, as it gives step-by-step instructions on how to carry out each of the protocols. It is also of interest to researchers, as each technique will be presented in the context of a specific neurological disorder, including Alzheimer's disease, multiple sclerosis, autism,

spectrum disorders schizophrenia major depressive disorder and bipolar disorder Finally it will also highlight the future research efforts in this field which are endeavoring to convert proteomic platforms to the form of hand held devices which can be used in a point of care setting and return diagnostic results within the timeframe of a visit to the general practitioner
