Parallel Processing for Scientific Computing Michael A. Heroux, Padma Raghavan, Horst D. Simon, 2006-01-01 Scientific computing has often been called the third approach to scientific discovery emerging as a peer to experimentation and theory Historically the synergy between experimentation and theory has been well understood experiments give insight into possible theories theories inspire experiments experiments reinforce or invalidate theories and so on As scientific computing has evolved to produce results that meet or exceed the quality of experimental and theoretical results it has become indispensable Parallel processing has been an enabling technology in scientific computing for more than 20 years This book is the first in depth discussion of parallel computing in 10 years it reflects the mix of topics that mathematicians computer scientists and computational scientists focus on to make parallel processing effective for scientific problems Presently the impact of parallel processing on scientific computing varies greatly across disciplines but it plays a vital role in most problem domains and is absolutely essential in many of them Parallel Processing for Scientific Computing is divided into four parts The first concerns performance modeling analysis and optimization the second focuses on parallel algorithms and software for an array of problems common to many modeling and simulation applications the third emphasizes tools and environments that can ease and enhance the process of application development and the fourth provides a sampling of applications that require parallel computing for scaling to solve larger and realistic models that can advance science and engineering This edited volume serves as an up to date reference for researchers and application developers on the state of the art in scientific computing It also serves as an excellent overview and introduction especially for graduate and senior level undergraduate students interested in computational modeling and simulation and related computer science and applied mathematics aspects Contents List of Figures List of Tables Preface Chapter 1 Frontiers of Scientific Computing An Overview Part I Performance Modeling Analysis and Optimization Chapter 2 Performance Analysis From Art to Science Chapter 3 Approaches to Architecture Aware Parallel Scientific Computation Chapter 4 Achieving High Performance on the BlueGene L Supercomputer Chapter 5 Performance Evaluation and Modeling of Ultra Scale Systems Part II Parallel Algorithms and

 is a low resolution propagation model and computer code for predicting atmospheric transmittance and background radiance
 from 0 to 50 000 cm⁻¹ at a resolution of 20 cm⁻¹ The code is based on the LOWTRAN 6 1983 model Multiple scattered
 radiation has been added to the model as well as new molecular band model parameters and new ozone and molecular
 oxygen absorption parameters for the UV Other modifications include a wind dependent desert model new cirrus cloud
 models and new cloud and rain models The code also includes new representative geographical and seasonal atmospheric
 models and updated aerosol models with options to replace them with user derived values An improved extra terrestrial solar
 source function is also included Six modes of program execution are allowed with the new model and computer code for a
 given slant path geometry This report contains a description to users for operating the LOWTRAN 7 computer code It
 summarizes the capabilities of the new code provides complete operating instructions as well as input and output from test
 cases for user validation Also included are operating instructions for three programs that utilize LOWTRAN 7 output plot
