Handbook of Applied Biopolymer Technology Sanjay K Sharma, Ackmez Mudhoo, 2011-06-20 Scientists are conducting active research in different fields of engineering science and technology by adopting the Green Chemistry Principles and methodologies to devise new processes with a view to help protect and ultimately save the environment from further anthropogenic interruptions and damage. With this in mind, the book provides an up-to-date coherently written and objectively presented set of chapters from eminent international researchers who are actively involved in academic and technological research in the synthesis, bio-degradation testing, and applications of biodegradable polymers and biopolymers. This pool of the latest ideas, recent research, and technological progress together with a high level of thinking with a comprehensive perspective makes the emerging field of biodegradable polymer science and engineering or bio-based polymers linked to environmental sustainability the essence of this key publication. The handbook consists of chapters written and contributed by international experts from academia who are world leaders in research and technology in sustainability and biopolymer and biodegradable polymer synthesis, characterisation, testing, and use. The book highlights the following areas: green polymers, biopolymers, and bionanocomposites; biodegradable and injectable polymers; biodegradable polyesters; synthesis and physical properties; discovery and characterization of biopolymers; degradable bioelastomers; lactic acid-based biodegradable polymers; enzymatic degradation of biodegradable polymers; biodegradation of polymers in the composting environment; recent development in biodegradable polymers; research and applications; and biodegradable foams. The book is aimed at technical research-oriented and marketing people in industry, universities, and institutions. It will also be of value to the worldwide public interested in sustainability issues and biopolymer development, as well as others interested in the practical means that are being used to reduce the environmental impacts of chemical processes and products to further eco-efficiency and to advance the utilization of renewable resources for a bio-based production and supplier chain. Readers will gain a comprehensive and consolidated overview of the immense potential and ongoing research in bio-based and biodegradable polymer science, engineering, and technology to make the world greener. [Handbook of Bioplastics and Biocomposites Engineering Applications](#) Srikanth Pilla, 2011-09-15 This Handbook is the first to explore the extensive applications made with bioplastics: Civil Engineering, Biomedical, Automotive, General Engineering. The majority of the chapters review the properties, processing, characterization, synthesis, and applications of the bio-based and biodegradable polymers and composites, including Polymers such as polylactic acid (PLA), polyhydroxybutyrate (PHB), guar gum-based plastics, cellulose polyesters, starch-based bioplastics, vegetable oil-derived bioplastics, biopolyethylene, chitosan, etc. Thermoplastic and thermosetting bioplastics and biocomposites with a focus on the automobile industry. The ways how to improve the properties of bioplastics, polymer blends, and biocomposites by combining them with both synthetic and natural fillers and reinforcements such as nanoclays, nanotubes, CNTs, and natural fibers, both wood and plant fibers. Studies that expand the

boundaries of bioplastics that will allow for the new materials to be applied to most generic engineering applications The Handbook will be of central interest to engineers scientists and researchers who are working in the fields of bioplastics biocomposites biomaterials for biomedical engineering biochemistry and materials science The book will also be of great importance to engineers in many industries including automotive biomedical construction and food packaging
