Robotic Persons Joshua K. Smith, 2021-02-26 Robotic Persons will introduce the evangelical community to the journey of Robotic Futurism and how current and forthcoming AI driven robots will impact human value and dignity This book will consider three key areas of robotic development and the existential risks on the horizon for humans in the fields of work war and sex There are risks in the fields of work because there is a temptation to replace human workers with automation Current arguments for the benefit of war fighting robots posit that these robots will eliminate war and the risk of war but there is much more to the story Arguments for sex and companion robots proffer that they will benefit the fringe community or help those who do not have a relative to care for them but again there are many ethical and philosophical problems with these arguments Robotic

Persons not only introduces the reader to these issues but also gives an evangelical response to each There is presently no evangelical work addressing these critical issues Robotic Persons will argue that granting legal personhood to qualified robots will further prevent dehumanizing use of robots and protect human dignity and value *Machine Learning* Ethem Alpaydin, 2016-10-07 A concise overview of machine learning computer programs that learn from data which underlies applications that include recommendation systems face recognition and driverless cars Today machine learning underlies a range of applications we use every day from product recommendations to voice recognition as well as some we don't yet use everyday including driverless cars It is the basis of the new approach in computing where we do not write programs but collect data the idea is to learn the algorithms for the tasks automatically from data As computing devices grow more ubiquitous a larger part of our lives and work is recorded digitally and as Big Data has gotten bigger the theory of machine learning the foundation of efforts to process that data into knowledge has also advanced In this book machine learning expert Ethem Alpaydin offers a concise overview of the subject for the general reader describing its evolution explaining important learning algorithms and presenting example applications Alpaydin offers an account of how digital technology advanced from number crunching mainframes to mobile devices putting today's machine learning boom in context He describes the basics of machine learning and some applications the use of machine learning algorithms for pattern recognition artificial neural networks inspired by the human brain algorithms that learn associations between instances with such applications as customer segmentation and learning recommendations and reinforcement learning when an autonomous agent learns act so as to maximize reward and minimize penalty Alpaydin then considers some future directions for machine learning and the new field of data science and discusses the ethical and legal implications for data privacy and security *Synesthesia* Richard E. Cytowic, 2018-03-09 An accessible concise primer on the neurological trait of synesthesia vividly felt sensory couplings by a founder of the field One in twenty three people carry the genes for the synesthesia Not a disorder but a neurological trait like perfect pitch synesthesia creates vividly felt cross sensory couplings A synesthete might hear a voice and at the same time see it as a color or shape taste its distinctive flavor or feel it as a physical touch In this volume in the MIT Press Essential Knowledge series Richard Cytowic the expert who returned synesthesia to mainstream science after decades of oblivion offers a concise accessible primer on this fascinating human experience Cytowic explains that synesthesia's most frequent manifestation is seeing days of the week as colored followed by sensing letters numerals and punctuation marks in different hues even when printed in black Other manifestations include tasting food in shapes seeing music in moving colors and mapping numbers and other sequences spatially One synesthete declares Chocolate smells pink and sparkly another invents a dish chicken vanilla ice cream and orange juice concentrate that tastes intensely blue Cytowic who in the 1980s revived scientific interest in synesthesia sees it now understood as a spectrum an umbrella term that covers five clusters of outwardly felt couplings that can occur via several pathways Yet synesthetic or not each brain uniquely filters

what it perceives Cytowic reminds us that each individual's perspective on the world is thoroughly subjective
