Drawing on decades of experience with global service providers and enterprise networks the authors illuminate new and evolving network technologies necessary for building 5G capable networks such as segment routing network slicing timing and synchronization edge computing distributed data centers integration with public cloud and more. They explain how 5G blurs boundaries between mobile core radio access and transport as well as the changes in the composition of a traditional cell site with the adoption of Open and Virtualized RAN resulting in a transition to mobile xHaul. Every chapter builds on earlier coverage culminating in a big picture presentation of a complete 5G network design. Understand the evolution of mobile technologies over the generation leading to 5G's foundational concepts and principles. Explore 5G changes to Radio Access Networks RAN the Mobile Core Mobile Transport and the need for tighter integration between them. Use Segment Routing to architect simplified SDN capable networks and enable network slicing for 5G. Rethink transport design to incorporate Far Edge Edge and public cloud based data centers augmenting centralized DCs to support distributed peering and Multi access Edge Compute. Provide guidance to meet the criteria and requirements for various aspects of Fronthaul Midhaul and Backhaul architecture such as transport protocol evaluation latency consideration routing design QoS modeling network device selection and more.
