DESCRIPTION AND FUNCTION

The Communications Terminal, AN/UGC-74C(V)3 is a bit serial, multi-speed page teleprinter designed to operate in the most severe tactical situations. The terminal can store 56,000 characters in the message memory and an additional 120,000 characters in the Auxiliary Memory Module (AMM) which maintains message storage integrity during power-down and self-test conditions. The AMM may be removed, transported to a different terminal anywhere, installed, and fully utilized with all previously stored messages in the AMM remaining intact and accessible. The terminal can be used in secure locations where radio frequency interference and undesired electrical emissions must be suppressed.
