Wheels Within Wheels A Study Of The Road Lobby:

Wheels Within Wheels Mick Hamer, 1974 **Invisible Bicycle**, 2018-09-11 The Invisible Bicycle brings together different insights into the social cultural and economic history of the bicycle and cycling in historical eras of ubiquitous bicycle use that have remained relatively invisible in bicycle history It revisits the typical timeline of cycling s decline in the 1950s and 1960s and the renaissance beginning in the 1970s by bringing forth the large national and local variations varying uses and images of the bicycle and different bicycle cultures as well as their historical background and motivations To understand the role possibilities and challenges of the bicycle today it is necessary to know the history that has formed them Therefore The Invisible Bicycle is recommended also to present day practitioners and planners of bicycle mobility Contributors are Peter Cox Martin Emanuel Tiina M nnist Funk Timo Myllyntaus Nicholas Oddy Harry Oosterhuis William Steele Manuel Stoffers Sue Yen Tjong Tjin Tai Frank Veraart **A Companion to the Anthropology of Environmental Health** Merrill Singer, 2016-04-27 A Companion to the Anthropology of Environmental Health presents a collection of readings that utilize a medical anthropological approach to explore the interface of humans and the environment in the shaping of health and illness around the world Features the latest ethnographic research from around the world related to the multiple impacts of the environment on health and of societies on their environments Includes contributions from international medical anthropologists conservationists environmental experts public health professionals health clinicians and other social scientists Analyzes the conditions of cultural and social transformation that accompany environmental and ecological impacts in all areas of the world Offers critical perspectives on theoretical and methodological advancements in the anthropology of environmental health along with future directions in the field *The Urban Transport Crisis in Europe and North America* J. Pucher, C. Lefevre, 1996-06-18 Increasing levels of auto ownership and use are causing severe social economic and environmental problems in virtually all countries in Europe and North America This book documents the worsening transport crisis and differences among countries in their urban transport and land use systems The focus is on public policies to deal with urban transport problems Through in depth case studies of eight countries the book seeks to evaluate the effectiveness of alternative solutions to transport problems and thus a way out of the transport crisis

Cycling Activism Peter Cox, 2023-07-28 The first full length study of cycling activism through the lens of social movement theory this book demonstrates that despite tremendous differences bike activism can be understood as a continuous and connected activity spanning a century and a half and across continents With examples from street protest to institutional lobbying it emphasises cycling s current central importance to zero carbon transport futures while showing that cycling activism is also not always about the bike or the cyclist as successive generations of activists have used cycling to articulate different visions of freedom and autonomy Moving from a consideration of social movement theory as a means to understand cycling activism the author presents a series of case studies of collective action organisations networks and

campaigns in order to illustrate and elaborate a theoretical model through which diverse campaigns and approaches to change can be understood As such Cycling Activism will appeal to those with interests in mobilisation for social change mobility and transport studies and social movement theory as well as cycling studies The Transatlantic Collapse of Urban Renewal Christopher Klemek,2011-07 The Transatlantic Collapse of Urban Renewal examines how postwar thinkers from both sides of the Atlantic considered urban landscapes radically changed by the political and physical realities of sprawl urban decay and urban renewal With a sweep that encompasses New York London Berlin Philadelphia and Toronto among others Christopher Klemek traces changing responses to the challenging issues that most affected the lives of the world s cities In the postwar decades the principles of modernist planning came to be challenged in the grassroots revolts against the building of freeways through urban neighborhoods for instance or by academic critiques of slum clearance policy agendas and then began to collapse entirely Over the 1960s several alternative views of city life emerged among neighborhood activists New Left social scientists and neoconservative critics Ultimately while a pessimistic view of urban crisis may have won out in the United States and Great Britain Klemek demonstrates that other countries more successfully harmonized urban renewal and its alternatives This much anticipated book provides one of the first truly international perspectives on issues central to historians and planners alike making it essential reading for anyone engaged with either field *Cycling and Society* Dave Horton,Paul Rosen,Peter Cox,2016-05-13 How can the social sciences help us to understand the past present and potential futures of cycling This timely international and interdisciplinary collection addresses this question discussing shifts in cycling practices and attitudes and opening up important critical spaces for thinking about the prospects for cycling The book brings together for the first time analyses of cycling from a wide range of disciplinary backgrounds including history sociology geography planning engineering and technology The book redresses the past neglect of cycling as a topic for sustained analysis by treating it as a varied and complex practice which matters greatly to contemporary social cultural and political theory and action *Cycling and Society* demonstrates the incredible diversity of contemporary cycling both within and across cultures With cycling increasingly promoted as a solution to numerous social problems across a wide range of policy areas in car dominated societies this book helps to open up a new field of cycling studies Cycling and the British Neil Carter,2022-12-10 Cycling is currently enjoying a boom in popularity What are the reasons behind this phenomenon How have perceptions and the popularity of cycling shifted This book charts the historical development of cycling both as a leisure and sporting activity since the 19th century and explores the wider political and cultural context in which cycling in Britain emerged In particular it examines cycling s relationship with environmental politics and its place in popular culture Neil Carter successfully traverses several historical sub disciplines including the history of transport leisure sport medicine and politics employing the analytical tools of class gender political culture the role of the state and commercialism to demonstrate how British identity has shaped and been shaped by cycling At a time when it has become

part of debates over transport and health Cycling and the British A Modern History provides a timely and clear analysis of the changes and continuities in attitudes towards cycling

State Crime Alan Doig, 2010-12-22 This book provides an introduction to state crime with a particular focus on the UK The use of crime by the UK to achieve its policy and political objectives is an underdeveloped aspect of academic study of individual and institutional criminality the exercise of political power public policy making and political development The book provides an overview of definitional issues before exploring possible examples of state crime in the UK and then considering why state crime occurs and how it is investigated and adjudicated State Crime is split into six sections in order to address a number of key questions what is state crime according to the literature What is a crime What is the state What are the drivers for the State to commit a crime What are the roles of the various institutions of the State in being involved in state crime and what in terms of monitoring or investigating state crime or unethical conduct are the roles of those institutions from the police through to Parliament responsible for holding governments and state institutions to account Unusually for books on state crime this book looks at a specific country as the context within which to explore these issues Further it not only looks at crime but also the structure of the modern state and thus provides a balanced and rigorous perspective with which to study the concept of state crime Overall this book seeks to provide an introduction to state crime for contemporary states which will facilitate the study of such issues as part of mainstream academic study across a number of disciplines

Selected Library Acquisitions United States. Department of Transportation, Land and Limits Richard Cowell, Susan Owens, 2005-07-05 In a new and critical analysis this book explores the impact of an influential idea sustainable development on the institutions and practices governing use of land It examines the paradox that in spite of increasing attention to sustainability land use conflict is as ubiquitous and intense as ever

The Transportation Experience William L. Garrison, David M. Levinson, 2014-01-09 The Transportation Experience explores the historical evolution of transportation modes and technologies The book traces how systems are innovated planned and adapted deployed and expanded and reach maturity where they may either be maintained in a polished obsolesce often propped up by subsidies be displaced by competitors or be reorganized and renewed An array of examples supports the idea that modern policies are built from past experiences William Garrison and David Levinson assert that the planning and control of nonlinear unstable processes is today's central transportation problem and that this is universal and true of all modes Modes are similar in that they all have a triad structure of network vehicles and operations but this framework counters conventional wisdom Most think of each mode as having a unique history and status and each is regarded as the private playground of experts and agencies holding unique knowledge operating in isolated silos However this book argues that while modes have an appearance of uniqueness the same patterns repeat systems policies structures and behaviors are a generic design on varying modal cloth In the end the illusion of uniqueness proves to be myopic While it is true that knowledge has accumulated from past experiences the heavy hand of these experiences places boundaries on

current knowledge especially on the ways professionals define problems and think about processes The Transportation Experience provides perspective for the collections of models and techniques that are the essence of transportation science and also expands the boundaries of current knowledge of the field **A Bibliography of British History, 1914-1989**

Keith Robbins,American Historical Association,Royal Historical Society (Great Britain),1996 Containing over 25 000 entries this unique volume will be absolutely indispensable for all those with an interest in Britain in the twentieth century Accessibly arranged by theme with helpful introductions to each chapter a huge range of topics is covered There is a comprehensive index *Natural Resources* Judith Rees,2017-10-19 In this book first published in 1990 Judith Rees

considers the spatial distribution of resource availability development and consumption and the distribution of resource generated wealth and welfare Showing that there are no simple answers she analyses the complex interactions between economic forces administrative structures and political institutions This well structured text is essential reading for upper level students in geography environmental planning economics and resource management The Car and British Society

Sean O'Connell,1998 The car was first introduced into British society over one hundred years ago Sean O Connell s study of the social impact of the car offers a radical new way of looking at the history of motoring **The Environmental Case for**

Brexit Ben Pontin,2019-05-30 The recent Brexit debates present leaving the European Union largely as a threat to environmental protection and to environmental law This exciting and important new work argues that Brexit represents a real opportunity for environmental protection in the United Kingdom freeing it from a pan European framework not necessarily fit for UK domestic purposes Central to the argument is the belief that environmental protection in the United Kingdom can most effectively be pursued through established domestic institutions looking inwards at local challenges and outwards at more global ones all the while drawing on considerable historical experience The book is designed to address rather than dismiss those concerns raised by environmental lawyers after the outcome of the referendum Provocative and compelling it offers an alternative vision of the UK environmental law framework outside of the European Union **Public**

Policy and Political Institutions Frank Hendriks,1999-01-01 With this important collection Hardy Hanappi and Wolfram Elsner have brought together an outstanding volume that is likely to have its impact on the development of evolutionary economics Expansive in its scope the innovative contributions range from evolutionary and institutional mechanisms dynamic market complexity as well as ontological groundwork of the rapidly emerging new evolutionary economics science The book will be of great interest to academics students and researchers of evolutionary and institutional economics Kurt Dopfer University of St Gallen Switzerland **Integrated Transport** Moshe Givoni,David Banister,2010-07-02 Travel is an

essential part of everyday life and today most journeys are multimodal It is the total travel experience that counts and integrated transport must reduce the inconvenience of transfers between modes Most research and many publications on transport policy advocate sustainable transport but the priority given to integration has been negligible Yet integration is one

of the most important means to advance sustainable transport and sustainability more generally While integrated transport systems are seen to be an ideal there is a failure to make the transition from policy to practice The authors argue that the achievement of sustainable transport is still a dream as an integrated transport policy is a prerequisite for a sustainable transport system It is only when the two concepts of sustainability and integration operate in the same direction and in a positive way that real progress can be made In this book transportation experts from across the world have addressed the questions about what is integration why is it so important and why is it so hard to achieve The book provides an in depth analysis of these issues and it aims to provide a better understanding of the subject about what should be strived for about what is realistic to expect and about how to move forward towards a more integrated provision of transport infrastructure services and management

Mobility, Space and Culture Peter Merriman, 2012-07-26 Over the past ten to fifteen years there has emerged an increasing concern with mobility in the social sciences and humanities In *Mobility Space and Culture* Peter Merriman provides an important and timely contribution to the mobilities turn in the social sciences encouraging academics to rethink the relationship between movement embodied practices space and place The book takes an interdisciplinary approach drawing upon theoretical and empirical work from across the social sciences and humanities to provide a critical evaluation of the relationship between mobility and place site reformulating places as in process open and dynamic spatial formations Merriman draws upon post structuralist writings on space practice and society to demonstrate how movement is not simply practised or experienced in relation to space and time but gives rise to rhythms forces atmospheres affects and materialities which are often more crucial to embodied apprehensions of events than sensibilities of spatiality and temporality He draws upon detailed empirical research on experiences of and social reactions to driving in late Victorian and Edwardian Britain to trace how the motor car became associated with sensations of movement space and enmeshed with debates about embodiment health visibility gender and politics The book will be essential reading for undergraduates and postgraduates studying mobility in sociology geography cultural studies politics transport studies and history

An Introduction to Sustainable Transportation Preston L. Schiller, Jeffrey R. Kenworthy, 2010-08-12 Transportation plays a substantial role in the modern world it provides tremendous benefits to society but it also imposes significant economic social and environmental costs Sustainable transport planning requires integrating environmental social and economic factors in order to develop optimal solutions to our many pressing issues especially carbon emissions and climate change This essential multi authored work reflects a new sustainable transportation planning paradigm It explores the concepts of sustainable development and sustainable transportation describes practical techniques for comprehensive evaluation provides tools for multi modal transport planning and presents innovative mobility management solutions to transportation problems Students of various disciplines planners policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing

transportation towards greater sustainability This text reflects a fundamental change in transportation decision making It focuses on accessibility rather than mobility emphasizes the need to expand the range of options and impacts considered in analysis and provides practical tools to allow planners policy makers and the general public to determine the best solution to the transportation problems facing a community The book starts by placing transportation within the broader sustainability discussion emphasising a comprehensive approach to sustainability planning and introducing the notion of regenerative transportation In sections on policymaking and planning the book examines how decisions are currently and how they should be made explaining the complex and often misunderstood area of public participation The authors explain demand management as applied to transportation and present lessons from other public arenas and areas of application especially in urban suburban areas The text takes readers through each and every mode of transport beginning with human powered modes and ending in motorized modes including marine and air transport The modes are analyzed separately and in comparison with others according to several criteria Capacity utility functionality considerations infrastructure demands resource consumption land use considerations pollution and costs In ways that non technically trained readers as well as planning students professionals can find useful the book includes guidance on how to optimize transportation systems balancing economic social and environmental objectives while creating just robust and diverse rather than one size fits all solutions The modes are grouped and compared within their respective contexts and there is vital discussion and differentiation between passenger and freight goods transport The final section develops a comprehensive summary of the previous chapters and develops arguments for sustainable transportation policymaking and integrated planning providing international examples and case studies and extracting from them general applications for integrated sustainable transportation Featuring extensive international examples and case studies textboxes graphics recommended reading and end of chapter questions the authors draw on considerable teaching and researching experience to present an essential ground breaking and authoritative text on sustainable transport
