- During phase 3, the primary focus is to improve performance.
- Assessment of the client's cardiorespiratory capacity at the second ventilatory threshold (VT2) is appropriate.
- Higher-intensity intervals that develop anaerobic endurance are introduced.
- Balancing training time spent below VT1, between VT1 and VT2, and at or above VT2 should be considered.
 - Zone 1 ($< VT1$): 70–80% of training time
 - Zone 2 (VT1 to $< VT2$): $<10\%$ of training time
 - Zone 3 ($\geq VT2$): 10–20% of training time

Anaerobic Bacteria Dwight W. Lambe, 2012-12-06 A symposium seems an appropriate vehicle to review recent as well as new data on important topics It is therefore our goal to present a symposium on selected topics of importance every three years Some topics will be updated and new topics will be presented A vast amount of information has been accumulated over the past ten years on the significance of anaerobic bacteria in infectious diseases This symposium was organized to discuss laboratory aspects normal flora pathogenicity serology and the patients immune response to anaerobic infection Important information on the patients immune response and serology of anaerobes which has accumulated over the last few years made these topics an important

part of the symposium Development of serological diagnostic tests undoubtedly will provide quicker and less expensive identification of certain anaerobic species in the future Utilization of the patients immune response to anaerobic septicemia has the potential of providing a diagnosis of the causative agent within 24 hours after onset of symptoms The development of such diagnostic methods and the use of these methods in the clinical laboratory in the future would provide rapid diagnostic information to the clinician on these life threatening infections Campylobacter was included in the symposium to emphasize the important role of this organism in human acute gastroenteritis The pathogenesis of Campylobacter in gastroenteritis has been recognized in certain European countries since 1972 although we have recognized the importance of Campylobacter gastroenteritis in the United States only within the past two years

entering the field and requiring a broad contemporary view of anaerobic bacteria and associated concepts Obligate anaerobes together with microaerophils are characterized by their sensitivity to oxygen This dictates specialized laboratory methods a fact which has led to many students being less familiar with anaerobes than their distribution and importance would warrant The metabolic strategies such as methanogenesis an oxygenic photosynthesis and diverse fermentative pathways which do not have equivalents in aerobic bacteria also make anaerobes worthy of attention In these limited pages an attempt has been made to cover the varied aspects of anaerobic bacteria and a bibliography has been included which will allow individual topics to be pursued in greater detail We are grateful to Mrs Winifred Webster and Mrs Hilary Holdsworth for typing the manuscript and to the Leeds University Audio Visual Service for preparing the figures Finally our thanks go to the students postgraduates and wives who read and criticized the manuscript
