Architectural Thinking in a Climate Emergency Sofie Pelsmakers,James Benedict Brown,2025-10-29 What is the role of architecture and the architect in the Anthropocene It s an immutable fact human activity is driving the climate and biodiversity crises that now threaten all life The damage we inflict on the planet undermines basic human rights displaces millions and intensifies structural racism sexism and segregation with the greatest burden falling on the most vulnerable people and ecosystems Architects must act The design and construction of most buildings and urban environments today are rooted in an economic model that pursues infinite growth Our profession is embedded in a paradigm that favours individual gain over collective benefit We are rewarded for overlooking the interdependence between people and the natural world Architecture contributes directly to environmental degradation and social injustice Architects agree that the profession must change But we lack the tools and knowledge to undertake the transformations that are urgently needed This book aims to address that need through 15 chapters illustrating how we can act collectively to make a difference Architectural Thinking in a Climate Emergency brings together writers researchers educators students and practitioners working at the forefront of this transformation Contributors come from fourteen countries across Africa Asia Europe North and South America and Oceania Many are leading voices in their fields others are emerging thinkers introducing fresh perspectives from both

academia and practice Above all they each affirm the architect's responsibility to help transition toward carbon neutral sustainable practices that advance social and environmental justice Architecture in Dialogue with an Activated Ground Urs Bette,2020-03-30 Architecture in Dialogue with an Activated Ground sets out to validate the role of the unreasonable in the design process Using case study projects architect Urs Bette gives an insight into the epistemological processes of his creative practice and unveils the strategies he deploys in order to facilitate the poetic aspects of architecture within a discourse whose evaluation parameters predominantly involve reason Themes discussed include the emergence of space from the staged opposition between the architectural object and the site and the relationship between emotive cognition and analytic synthesis in the design act In both cases there is a necessary engagement with forms of unreasonable thought action or behaviours By arguing for the usefulness and validity of the unreasonable in architecture and by investigating the performative relationship between object and ground Bette contributes to the discourse on extensions growth and urban densification that tap into local histories and voices including those of the seemingly inanimate the architecture itself and the ground it sits upon to inform the site related production of architectural character and space In doing so he raises debates about the values pursued in design approval processes and the ways in which site relatedness is both produced and judged
