Trees in Paradise Jared Farmer, 2013-10-21 From roots to canopy a lush verdant history of the making of California California now has more trees than at any time since the late Pleistocene This green landscape however is not the work of nature It's the work of history In the years after the Gold Rush American settlers remade the California landscape harnessing nature to their vision of the good life Horticulturists boosters and civic reformers began to improve the bare brown countryside planting millions of trees to create groves wooded suburbs and landscaped cities They imported the blue green eucalypts whose tangy fragrance was thought to cure malaria They built the lucrative Orange Empire on the sweet juice and thick skin of the Washington navel an industrial fruit They lined their streets with graceful palms to announce that they were not in the Midwest anymore To the north the majestic coastal redwoods inspired awe and invited exploitation A resource in the state the durable heartwood of these timeless giants became infrastructure transformed by the saw teeth of American enterprise By 1900 timber firms owned the entire redwood forest by 1950 they had clear cut almost all of the old growth trees In time California's new landscape proved to be no paradise the eucalypts in the Berkeley hills exploded in fire the orange groves near Riverside froze on cold nights Los Angeles's palms harbored rats and dropped heavy fronds on the streets below Disease infestation and development all spelled decline for these nonnative evergreens In the north however a new forest of second growth redwood took root nurtured by protective laws and

sustainable harvesting Today there are more California redwoods than there were a century ago Rich in character and story Trees in Paradise is a dazzling narrative that offers an insightful new perspective on the history of the Golden State and the American West

Cottonwood and the River of Time Reinhard F. Stettler,2011-12-01 Cottonwood and the River of Time looks at some of the approaches scientists have used to unravel the puzzles of the natural world With a lifetime of work in forestry and genetics to guide him Reinhard Stettler celebrates both what has been learned and what still remains a

mystery as he examines not only cottonwoods but also trees more generally their evolution and their relationship to society Cottonwoods flourish on the verge near streams and rivers Their life cycle is closely attuned to the river s natural dynamics An ever changing floodplain keeps generating new opportunities for these pioneers to settle and prepare the ground for new species Perpetual change is the story of cottonwoods but in a broader sense the story of all trees and all kinds of life Through the long parade of generation after generation as rivers meander and glaciers advance and retreat trees have adapted and persisted some for thousands of years How do they do this And more urgently what lessons can we learn from the study of trees to preserve and manage our forests for an uncertain future In his search for answers Stettler moves from the floodplain of a West Cascade river where seedlings compete for a foothold to mountain slopes where aspens reveal their genetic differences in colorful displays from the workshops of Renaissance artists who painted their masterpieces on poplar to labs where geneticists have recently succeeded in sequencing a cottonwood s genome from the intensively cultivated tree plantations along the Columbia to old growth forests challenged by global warming Natural selection and adaptation the comparable advantages and disadvantages of sexual versus asexual reproduction the history of plant domestication and the purposes risks and potential benefits of genetic engineering are a few of the many chapters in this story By offering lessons in how nature works as well as how science can help us understand it Cottonwood and the River of Time illuminates connections between the physical biological and social worlds

Lumber World Review, 1925

Forestry in the U.S. South Mason C. Carter, Robert C. Kellison, R. Scott Wallinger, 2015-11-09 During the second half of the twentieth century the forest industry removed more than 300 billion cubic feet of timber from southern forests Yet at the same time partnerships between public and private entities improved the inventory health and productivity of this vast and resilient resource A comprehensive and multilayered history Forestry in the U S South explores the remarkable commercial and environmental gains made possible through the collaboration of industry universities and other agencies This authoritative assessment starts by discussing the motives and practices of early lumber companies which having exhausted the forests of the Northeast by the turn of the twentieth century aggressively began to harvest the virgin pine of the South with production peaking by 1909 The rapidly declining supply of old growth southern pine triggered a threat of timber famine and inspired efforts to regulate the industry By mid century however

industrial forestry had its own profit incentive to replenish harvested timber This set the stage for a unique alliance between public and private sectors which conducted cooperative research on tree improvement fertilization seedling production and other practices germane to sustainable forest management By the close of the 1990s concerns about an inadequate timber supply gave way to questions about how to utilize millions of acres of pine plantations approaching maturity No longer concerned with the future supply of raw material and facing mounting global competition the U S pulp and paper industry consolidated restructured and sold nearly 20 million acres of forests to Timber Investment Management Organizations TIMOs and Real Estate Investment Trusts REITs resulting in an entirely new dynamic for private forestry in the South Incomparable in scope Forestry in the U S South spotlights the people and organizations responsible for empowering individual forest owners across the region tripling the production of pine stands and bolstering the livelihoods of thousands of men and women across the South **Visions of Paradise** ,2008 Culled from original interviews with the photographers of National Geographic this visually beautiful and compelling book shares the places these men and women have personally found to be Heaven on Earth 250 photographs *American Forestry* ,1899
