The software enables users to synthesize singing by typing in lyrics and melody. It uses synthesizing technology with specially recorded vocals of voice actors or singers. To create a song the user must input the melody and lyrics. A piano roll type interface is used to input the melody and the lyrics can be entered on each note. The software can change the stress of the pronunciations add effects such as vibrato or change the dynamics and tone of the voice. Each Vocaloid is sold as a singer in a box designed to act as a replacement for an actual singer. The software is available in English and Japanese although a Chinese version was produced for Sonika. The software is intended for professional musicians as well as light computer music users and has so far sold on the idea that the only limits are the users own skills. web a pll is a frequency synthesizer system that produces an output signal whose phase depends on the phase of its input signal in the simplest form a pll consists of a phase frequency detector pfd charge pump loop filter voltage controlled oscillator vco and a clock divider in a feedback loop

modeling of fractional n division frequency synthesizers with simulink - Nov 07 2022

web feb 1 2001 this paper describes a delta sigma delta sigma modulation and fractional n frequency division technique to perform indirect digital frequency synthesis based on the use of a phase locked loop pll
