were able to access a range of materials from the country's varied natural landscape: precious gold and silver, sparkling crystals and colourful stones, freshwater pearls, shells and parts of rare animals. Following these materials on their journey from hill and shore across the jeweller's bench and on to the bodies of wearers, this book challenges the persistent notion that the forces of industrialisation led to the decline of craft. It instead reveals a vivid picture of skilled producers who were driving new and revived areas of hand skill and who were key to fostering a focused cultural engagement with the natural world among both producers and consumers through the things they made. By placing producers and their skill in cultural context, the book reveals how examining the materiality of even the smallest of objects can offer new and multifaceted insights into the wider transformations that marked British history during the long 19th century. Uniting a vast array of jewellery objects with a range of other sources including paintings, engravings, newspaper reports, letters, inventories of big houses and small workshops, sketchbooks, novels, works of literary geology and early travel writings, this book provides a deep dive into the cultural history of jewellery production through accessible thematic studies. In doing so, it sets out innovative methodologies for writing about the histories of craft, production, the natural environment and the material world. Now available in a paperback edition, it will be an important addition to the bookshelf of cultural historians and those interested in Scotland's wild landscapes and natural objects.
