Adriana Peña Pérez Negrón, Graciela Lara López, Héctor Rafael Orozco Aguirre, 2020-03-12 Virtual Reality is not real life. Instead, it is life-like creations using computer-generated scenarios. Human behavior is replicated in virtual scenarios where every detail is controlled by computers and in situations that can be repeated under the same conditions. Based on technology and design, the user can experience presence. In the virtual world, users are embodied in avatars that represent them and are the means to interact with the virtual environment. Avatars are graphical models that behave on behalf of the human behind them. The user avatar is a proxy that also backs interaction with others, allowing computer-mediated interactions. Analyses directed to understand people's perceptions, personal and social behavior in computer-mediated interactions comprise a multidisciplinary area of study that involves, among others, computer science, psychology, and sociology. In the last two decades, a number of studies supported by Virtual Reality have been conducted to understand human behavior in some cases, the implications of the technology, or to reproduce artificial human behavior. This book presents a collection of studies from recognized researchers in the area.
