

Coral Reefs_ Formation, Threats, and Protection

READING COMPREHENSION

Passage 1
The Great Barrier Reef: A Natural Wonder

The Great Barrier Reef is the world's largest coral reef system, composed of over 2,900 individual reefs and 600 islands stretching for over 2,000 kilometers off the northeastern coast of Australia. It is a UNESCO World Heritage Site and is renowned for its incredible biodiversity and natural beauty.

Passage 2
Threats to Coral Reefs: Climate Change and Human Activity

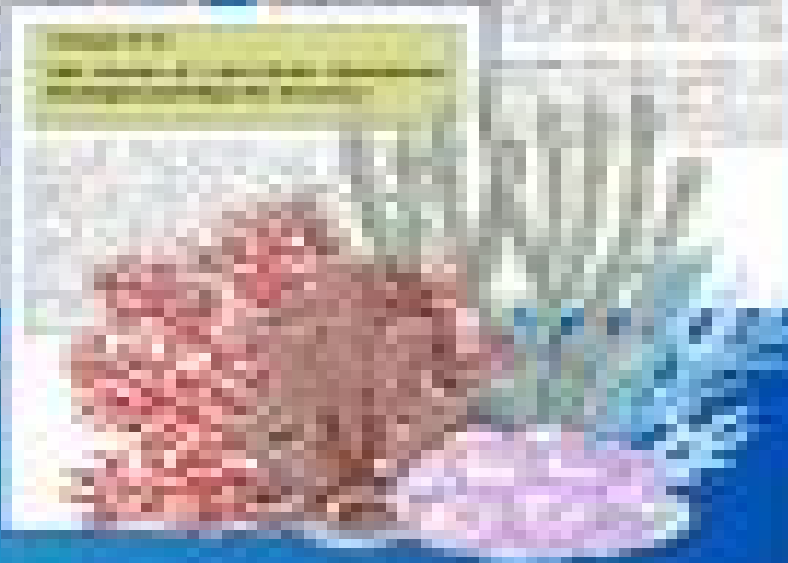

Coral reefs are facing significant threats from climate change and human activity. Rising sea surface temperatures lead to coral bleaching, where the coral loses its vibrant colors and becomes more susceptible to disease. Ocean acidification, caused by increased carbon dioxide levels, weakens the coral's skeletal structure. Human activities such as overfishing, coastal development, and pollution also pose major threats to the health of coral reefs.

Passage 3
Protecting Coral Reefs: Conservation Efforts and Sustainable Tourism

Conservation efforts are crucial for the protection of coral reefs. Marine protected areas (MPAs) are established to restrict human activities and allow coral reefs to recover. Sustainable tourism practices, such as responsible diving and snorkeling, help minimize human impact on the reefs. International agreements and local government policies are also essential for the long-term protection of these vital ecosystems.

Passage 4
The Role of Coral Reefs: Ecosystem Services and Biodiversity

Coral reefs provide a wide range of ecosystem services, including coastal protection, fish and other marine life habitat, and tourism. They are also a source of biodiversity, with many species of coral and other marine organisms found only on reefs. The loss of coral reefs would have a devastating impact on the marine ecosystem and the communities that depend on them.
