Haidle,Nicholas J. Conard,Michael Bolus,2016-01-19 This volume introduces a model of the expansion of cultural capacity as a systemic approach with biological historical and individual dimensions It is contrasted with existing approaches from primatology and behavioural ecology influential factors like differences in life history and demography are discussed and the different stages of the development of cultural capacity in human evolution are traced in the archaeological record The volume provides a synthetic view on a the different factors and mechanisms of cultural development and b expansions of cultural capacities in human evolution beyond the capacities observed in animal culture so far It is an important topic because only a volume of contributions from different disciplines can yield the necessary breadth to discuss the complex subject The model introduced and discussed originates in the naturalist context and tries to open the discussion to some culturalist aspects thus the publication in a series with archaeological and biological emphasis is apt As a new development the synthetic model of

expansion of cultural capacity is introduced and discussed in a broad perspective Biologising the Social Sciences David Canter, David Turner, 2015-02-20 You can hardly open a paper or read an academic journal without some attempt to explain an aspect of human behaviour or experience by reference to neuroscience biological or evolutionary processes This biologising has had rather a free ride until now being generally accepted by the public at large However there is a growing number of scholars who are challenging the assumption that we are little more than our bodies and animal origins This volume brings together a review of these emerging critiques expressed by an international range of senior academics from across the social sciences Their arguments are firmly based in the empirical scientific tradition They show the lack of logic or evidence for many biologising claims as well as the damaging effects these biological assumptions can have on issues such as dealing with dyslexia or treating alcoholism This important book originally published as a special issue of Contemporary Social Science contributes to a crucial debate on what it means to be human This collection of articles by David Canter and his colleagues rigorously argued and richly informative are of immense importance It is astonishing that as Canter puts it in his brilliant overview of biologising trends there are those in the humanities who need to be reminded that human beings can talk and interact with each other generating cultures and societies that have an existence that cannot be reduced to their mere mechanical parts Professor Raymond Tallis FRCP FMedSci DLitt LittD in the Preface **The Development of the Mediated Mind** Joan M. Lucariello, Judith A. Hudson, Robyn Fivush, Patricia J. Bauer, 2004-07-19 In this work the contributors examine ways in which cognition is embedded in everyday meaningful activities and the role of social context and cultural symbol systems such as language and text influence children's developing concepts and thought A Natural History of Rape Randy Thornhill, Craig T. Palmer, 2001-02-23 A biologist and an anthropologist use evolutionary biology to explain the causes and inform the prevention of rape In this controversial book Randy Thornhill and Craig Palmer use evolutionary biology to explain the causes of rape and to recommend new approaches to its prevention According to Thornhill and Palmer evolved adaptation of some sort gives rise to rape the main evolutionary question is whether rape is an adaptation itself or a by product of other adaptations Regardless of the answer Thornhill and Palmer note rape circumvents a central feature of women's reproductive strategy mate choice This is a primary reason why rape is devastating to its victims especially young women Thornhill and Palmer address and claim to demolish scientifically many myths about rape bred by social science theory over the past twenty five years The popular contention that rapists are not motivated by sexual desire is they argue scientifically inaccurate Although they argue that rape is biological Thornhill and Palmer do not view it as inevitable Their recommendations for rape prevention include teaching young males not to rape punishing rape more severely and studying the effectiveness of chemical castration They also recommend that young women consider the biological causes of rape when making decisions about dress appearance and social activities Rape could cease to exist they argue only in a society knowledgeable about its evolutionary causes The book includes a useful summary of evolutionary theory and a comparison of

evolutionary biology s and social science s explanations of human behavior The authors argue for the greater explanatory power and practical usefulness of evolutionary biology The book is sure to stir up discussion both on the specific topic of rape and on the larger issues of how we understand and influence human behavior

Human Behavior in Hazardous Situations Jan M T Daalmans, Juni Daalmans, 2012-11-07 Human Behavior in Hazardous Situations introduces a new generation within safety management fully developed with neuropsychological insights developed in collaboration with and put to test by the chemical and process industries Until now there has been little theoretical framework on how and especially why people behave the way they do in hazardous situations Human Behavior in Hazardous Situations presents new theories based on a human behavioral approach to offer a fresh perspective on safety management By way of case studies practical tips and exercises Dr Jan Daalmans demonstrates how this neuropsychological approach can be applied for those safety managers working in the Chemical Process and Pharmaceutical industries Presents new brain based approaches to safety with a historical perspective on the evolution of the safety management Practical tips and guidance for those working in the chemical and process industries Including exercises and case studies to demonstrate the practical application of techniques
