Researching Institutions in Natural Resource Governance Fiona Nunan, 2024-12-06 This

book presents an overview of different data collection methods and approaches that have been used to identify and analyse institutions associated with natural resource governance. Institutions as rules of the game are fundamental to the management governance and use of renewable natural resources such as fisheries, forests and water. Yet researching institutions, particularly informal institutions, can be challenging as they can be difficult to identify, investigate and understand. This volume tackles this challenge head on. The innovative collection brings together contributions from different disciplines and traditions, reporting and reflecting on a range of qualitative and quantitative research methods and experiences. The book begins by reviewing definitions and typologies of institutions and introduces different approaches to researching institutions in natural resource governance, namely the Bloomington School associated with Elinor Ostrom and Critical Institutionalism. Following this, each chapter provides an overview and example of application of research approaches and methods, including mixed methods, institutional grammar, fuzzy cognitive mapping, network analysis, assemblage and ethnography. The concluding chapter identifies key insights into institutions and lessons on researching institutions. From these, the chapter provides a set of observations on researching institutions in natural resource governance with the aim of providing guidance for new and experienced researchers. The volume provides an essential introduction for students and researchers into the range of methods and approaches and their practical application that can be used to research institutions associated with natural resource governance.

Rural Development in Practice Willem van Eekelen, 2020-05-04 *Rural Development in Practice* focuses on the evolving nature of rural development in the Global South. It outlines how we got to where we are today, checks what we can learn from history and explores the development drivers, facilitators and obstacles most likely to shape the years ahead. The book covers the management of fishing grounds, forests, grazing lands, water sources and soil, and looks at the effects of infrastructure, trade mechanisms and new crop varieties on farming. The author discusses the opportunities and challenges of microfinance, social safety nets and migration, and assesses the way ICT and climate change are changing everything rapidly. Real life examples, exercises, role plays, textboxes, anecdotes and illustrative artwork are used to bring concepts and theories to life, and every chapter concludes with a section that explores how best to tackle the tough and complex dilemmas of our time. *Rural Development in Practice* is essential reading for students at all levels and may be of benefit for programme and policy staff in rural focused government departments, multilateral agencies and non government organisations.
