Physico-Chemical Aspects of Food Processing S.T. Beckett, 2012-12-06 Food processing is now the biggest industry in the UK and in many other countries It is also rapidly changing from what was essentially a craft industry batch processing relatively small amounts of product to a very highly automated one with continuously operating high speed production lines In addition consumers have developed a greater expectation for consistently high standard products and coupled this with demands for such things as a

more natural flavour lower fat etc The need for an increased knowledge of the scientific principles behind food processing has never been greater Within the industry itself increased automation company diversification and amalgamations etc have meant that those working in it have often to change their field of operation Whereas twenty years ago someone starting work in one branch of the food industry could expect if he or she so desired to work there all their working lives this is now seldom the case This means that a basic knowledge of the principles behind food processing is necessary both for the student at university or college and for those already in the industry It is hoped therefore that this book will appeal to both and prove to be a useful reference over a wide range of food processing
