

The Nervous System

The nervous system

The nervous system is composed of two integrated subdivisions: an extensive peripheral nervous system, which extends throughout the body, and a central nervous system, which is located in the head and spine.

The CNS includes the brain and spinal cord, which are covered by protective meninges called the meninges. The peripheral nervous system (PNS) includes all the other nerves in the body. The PNS is composed of all the nerves that extend from the CNS to the rest of the body. The PNS is responsible for carrying information from the CNS to the rest of the body and vice versa.

The PNS is composed of all the nerves that extend from the CNS to the rest of the body. The PNS is responsible for carrying information from the CNS to the rest of the body and vice versa.

Spinal cord

The spinal cord and nerves

The spinal cord is a long, thin, tube-shaped structure that extends from the base of the brain down to the lower back. It is composed of a central canal, dorsal horn, and ventral horn. The spinal cord is responsible for carrying information from the brain to the rest of the body and vice versa.

Structure of motor neurons

Motor neurons are responsible for carrying information from the brain to the muscles. They are composed of a cell body, dendrites, and an axon. The axon is covered by a myelin sheath.

What are synaptic connections?

Synaptic connections are the points where two neurons meet and communicate. They are composed of a presynaptic terminal and a postsynaptic terminal. The presynaptic terminal releases neurotransmitters into the synaptic cleft, which then bind to receptors on the postsynaptic terminal.

Building Resilience to Trauma Elaine Miller-Karas, 2015-02-20 After a traumatic experience survivors often experience a cascade of physical emotional cognitive behavioral and spiritual responses that leave them feeling unbalanced and threatened Building Resilience to Trauma explains these common responses from a biological perspective reframing the human experience from one of shame and pathology to one of hope and biology It also presents alternative approaches the Trauma Resiliency Model TRM and the Community Resiliency Model CRM which offer concrete and practical skills that

resonate with what we know about the biology of trauma In programs co sponsored by the World Health Organization the Unitarian Universalist Service Committee ADRA International and the department of behavioral health of San Bernardino County the TRM and the CRM have been used to reduce and in some cases eliminate the symptoms of trauma by helping survivors regain a sense of balance Clinicians will find that they can use the models with almost anyone who has experienced or witnessed any event that was perceived as life threatening or posed a serious injury to themselves or to others The models can also be used to treat symptoms of vicarious traumatization and compassion fatigue **Leading into the Future** Hans J. A New Understanding of Mental Disorders Andreas Heinz, 2017-10-06 A new computational and dimensional approach to understanding and classifying mental disorders modeling key learning and decision making mechanisms across different mental disorders Even as researchers look for neurobiological correlates of mental disorders many of these disorders are still classified solely according to the manifestation of clinical symptoms Neurobiological findings rarely help diagnose a specific disease or

predict its outcome Although current diagnostic categories are questionable sometimes labeling common states of human suffering as disorders traditional neuroimaging approaches are not sophisticated enough to capture the neurobiological markers of mental disorder In this book Andreas Heinz proposes a computational and dimensional approach to understanding and classifying mental disorders modeling key learning and decision making mechanisms across different mental disorders Such an approach focuses on the malleability and diversity of human behavior and its biological underpinnings Heinz explains basic learning mechanisms and their effects on human behavior focusing not on single disorders but on how such mechanisms work in a multitude of mental states For example he traces alterations in dopamine reinforcement learning in psychotic affective and addictive disorders He investigates to what extent these basic dimensions of mental disorders can account for such syndromes as craving and loss of control in addiction positive and negative mood states in affective disorders and the altered experience of self and world associated with psychotic states Finally Heinz explores the clinical and therapeutic implications of such accounts He argues that a focus on learning mechanisms with its emphasis on human creativity and resilience should help reduce the stigma of mental disorder
