Global Imbalances Pietro Cova, Massimiliano Pisani, Mr. Alessandro Rebucci, 2009-03-01 This paper investigates the role played by emerging Asia in the emergence and evolution of the global trade imbalances Based on simulations in a general equilibrium model of the world economy we find that a productivity slowdown in the non tradable sector of these economies in the second half of the 1990s fits regional macroeconomic developments relatively well but has limited spillover effect to the United States trade balance In contrast an increase in the desired level of emerging Asia net foreign assets starting in 2001 not only fits regional developments relatively well but also has a significant spillover effect to the United States

Python in Neuroscience Eilif Muller, James A. Bednar, Markus Diesmann, Marc-Oliver Gewaltig, Michael Hines, Andrew P. Davison, 2015-07-23 Python is rapidly becoming the de facto standard language for systems integration. Python has a large user and developer base external to the neuroscience community and a vast module library that facilitates rapid and maintainable development of complex and intricate systems. In this Research Topic we highlight recent efforts to develop Python modules for the domain of neuroscience software and neuroinformatics simulators and simulator interfaces, data collection and analysis, sharing, re-use, storage and databasing of models and data, stimulus generation, parameter search and optimization, visualization, VLSI hardware interfacing. Moreover, we seek to provide a representative overview of existing mature Python modules for neuroscience and neuroinformatics to demonstrate a critical mass and show that Python is an appropriate choice of interpreter interface for future neuroscience software development.

Hybrid Solutions for the Modelling of Complex Environmental Systems Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches. While several concurrent definitions of hybrid modeling can be found in the literature, it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems. The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility, capabilities or computational efficiency. This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems. Chapters cover applied examples as well as modeling methodology.
