Journey of Caring is a practical guide to finding personal meaning in the 21st century care experience Personal transformation is usually an experience we actively seek out not one that hunts us down Becoming a caregiver is one transformation that comes at us requiring us to rethink everything we once knew Everything changes responsibilities beliefs hopes expectations and relationships Caregiving is not just a role reserved for saints eventually everyone is drafted into the caregiver role It s not a role people medically train for it s a new type of relationship initiated by a loved one s need for care And it s a role that cannot be quarantined to home because it infuses all aspects of our lives Caregivers today find themselves in need of a crash course in new and unfamiliar skills They must not only care for a loved one but also access hidden community resources collaborate with medical professionals craft new narratives consistent with the changing nature of their care role coordinate care with family seek information and peer support using a variety of digital platforms and negotiate social support all while attempting to manage conflicts between work life and relationship roles The moments that mark us in the transition from loved one to caregiver matter because if we don t make sense of how we are being transformed we risk undervaluing our care experiences denying our evolving beliefs becoming trapped by other s misunderstandings and feeling underappreciated burned out and overwhelmed Informed by original caregiver research and proven advocacy strategies this book speaks to caregiving as it unfolds in all of its confusion chaos and messiness Readers won t find well intentioned clich s or care stereotypes in this book There are no promises to help caregivers return to a life they knew before caregiving No this book greets caregivers where they are in their journey new or chronic not where others expect or want them to be

Primates and Cetaceans Juichi Yamagiwa, Leszek Karczmarski, 2013-11-20 In this book the editors present a view of the socioecology of primates and cetaceans in a comparative perspective to elucidate the social evolution of highly intellectual mammals in terrestrial and aquatic environments Despite obvious differences in morphology and eco physiology there are many cases of comparable sometimes strikingly similar patterns of sociobehavioral complexity A number of long term field studies have accumulated a substantial amount of data on the life history of various taxa foraging ecology social and sexual relationships demography and various patterns of behavior from dynamic fission fusion to long term stable societies from male bonded to bisexually bonded to matrilineal groups Primatologists and cetologists have come together to provide four evolutionary themes 1 social complexity and behavioral plasticity 2 life history strategies and social evolution 3 the interface between behavior demography and conservation and 4 selected topics in comparative behavior These comparisons of taxa that are evolutionarily distant but live in comparable complex sociocognitive environments boost our appreciation of their sophisticated mammalian societies and can advance our understanding of the ecological factors that have shaped their social evolution This knowledge also facilitates a better understanding of the day to day challenges these animals face in the human dominated world and may improve the capacity and effectiveness of our conservation efforts

Human Ascent Henry Gobus, 101-01-01 Human Ascent overturns the traditional Darwinian view of evolution as a

mechanical struggle for survival In this groundbreaking work psychologist Henry Gobus argues that life evolves not through competition but through the reduction of instinct and the rise of emotional attachment Love empathy and connection not aggression or dominance are the true engines of change and intelligence For readers of Charles Darwin's On the Origin of Species Richard Dawkins The Selfish Gene Yuval Noah Harari's Sapiens E O Wilson's The Social Conquest of Earth or Carl Jung's Modern Man in Search of a Soul Human Ascent offers a radical and unifying alternative evolution as an emotional and intelligent journey revealing how attachment and compassion have guided life's unfolding from its earliest beginnings Bridging psychology biology and philosophy Gobus redefines evolution as a process of increasing emotional depth where empathy becomes intelligence and connection becomes survival Human Ascent illuminates the origins of consciousness mental health and moral awareness offering a new foundation for education psychology and social reform

Reviews Dr Daniel Gileppa Consultant Psychiatrist Initially sceptical as a Dawkins enthusiast Dr Gileppa I was impressed with the parallels Mr Gobus has drawn between this particular concept and evolution and how he can set out his arguments in a way that can engage all levels of knowledge from novice to advanced The thing that most amazes me however is that nobody has made the comparison before It's something that is not immediately apparent but seems so obvious once it's pointed out I do not doubt that it will be zealously critiqued particularly by those who have an interest in maintaining a conflicting opinion but personally I'm converted Mark Ruge Connect Magazine Ruge describes Human Ascent as a compelling and convincing alternative to Darwin's theory He praises Gobus for showing that random mutations do not drive evolution but by the growth of intelligence through emotional attachment He highlights how the theory explains gaps in Darwin's model accounts for complex shifts in reproduction and even addresses humanity's paradoxical mix of brilliance and fragility Ruge calls it an exciting and ground breaking book well worth reading

Why Read Human Ascent Challenges Darwin's traditional model of evolution Introduces Attachment Theory of Evolution where emotional bonds drive intelligence Backed by research case studies and fresh insights from psychology Praised by independent reviewers and a practising psychiatrist

Nature's Code: Decoding the Language of Life Ali Royston, What if life itself speaks a language From genetic blueprints to cellular signals this eye opening book reveals how nature encodes deciphers and transmits meaning across species and time

Marriage and the Family Karen Kayser Kersten, Lawrence K. Kersten, 1988

Access to Health Rebecca J. Donatelle, Lorraine G. Davis, 1994 This third edition provides a thorough and comprehensive coverage of health and well being concepts and theory while also providing the tools and strategies to empower students to make responsible decisions about their personal health and the health of their

community and world Changes in this edition reflect results of extensive market research in the personal health market These include new coverage of health behaviours and violence and renewed emphasis on managing behaviour to affect healthy lifestyles Communicating in the Anthropocene C. Vail Fletcher,Alexa M. Dare,2021-02-04 The purpose of Communicating in the Anthropocene Intimate Relations is to tell a different story about the world Humans especially those raised in Western traditions have long told stories about themselves as individual protagonists who act with varying degrees of free will against a background of mute supporting characters and inert landscapes Humans can be either saviors or destroyers but our actions are explained and judged again and again as emanating from the individual And yet as the coronavirus pandemic has made clear humans are unavoidably interconnected not only with other humans but with nonhuman and more than human others with whom we share space and time Why do so many of us humans avoid deny or resist a view of the world where our lives are made possible maybe even made richer through connection In this volume we suggest a view of communication as intimacy We use this concept as a provocation for thinking about how we humans are in an always already state of being in relation with other humans nonhumans and the land **The London Lancet** ,1860
