But the authors put one more twist on a well-known economic strategy: instead of a gradual move to a centrally organized system, they recommend a decentralized approach. They conclude that the greatest big-market advantage goes to those who have the most information, not those who have the most money. The U.S. has a limited ability to make use of its money, but it does have a lot of information. So, they argue, it's best to let market participants go ahead and get their own way.

These authors also identified many other important species that they saw during their target efforts. The authors also identified, rather in a general way, the quality of observed environmental conditions. Study groups often noted water levels, water temperature, wind speed, and direction of waves, and other factors (e.g., birds, boats, etc.). This includes considering the impact of the decision on stakeholders, the company's reputation, and the law. A manager should also consider the company's values and mission statement when making a decision. Finally, a manager should consider the long-term consequences of the decision, not just the short-term consequences.

Behavioral Toxicology Bernard Weiss, 2013-03-09 Behavioral toxicology is a young discipline in the United States so young in fact that this is one of its first books Behavioral questions are bound to play a major role in future scientific work and governmental decisions involving the health effects of environmental contaminants and other chemicals This role springs from two key problems that face scientists and public agencies required to set acceptable exposure standards or to determine criteria for the toxicity of therapeutic chemicals How do you evaluate effects that may show up only as subtle functional disturbances And how do you detect toxic effects early enough so that they may still be reversible before they produce major damage The contributions in this book come from a collection of scientists whose interests span a wide variety of problem areas The focus is largely on methodological issues because they represent the most immediate concern of the discipline We expect that this collection of papers will represent a useful source book for behavioral toxicology for some time For the past few years the University of Rochester's Department of Radiation Biology and Biophysics has sponsored a series of international conferences on chemical toxicity partly as a response to concern over the consequences to health of the rich chemical soup in which we live This book is based upon presentations made to the fifth of the series Held in June 1972 it was the first formal meeting devoted to behavioral toxicology in this country **Mid-Atlantic Integrated Assessment (MAIA)**
