Tropical Deforestation A Socio Economic Approach:

Tropical Deforestation C. J. Jepma, 2014-02-04 The depletion of the tropical rain forests has attracted considerable attention in recent times and the serious consequences for the global biosphere are widely acknowledged Yet deforestation continues apace and in some areas for example southeast Asia the very existence of the forests is seriously threatened Contrary to popular belief evidence suggests that local economic and living conditions are more significant in this than timber exploitation for exports to the Northern countries Tropical Deforestation A Socio Economic Approach offers a new perspective on the economic imperatives which encourage indigenous populations to encroach upon their own forests and shows how action against deforestation must form part of a wider movement to improve both the living conditions of the local inhabitants and the durability of their national economies Part 1 offers an overview of the processes surrounding deforestation and an assessment of the current situation Part 2 analyses the land use issues and explains the socioeconomic imperatives in the affected regions In an absorbing conclusion Part 3 guides the reader through a series of hypothetical policy scenarios using a specially adapted economic computer model to predict which combinations of policies and trade arrangements might bring about a more beneficial state of affairs Tropical Deforestation Catrinus J Jepma, 1995 *The Social Dynamics of Deforestation in the Philippines* Gerhard van den Top, 2003 This work offers a detailed case study on the dynamics of forest use degradation and loss in Northeast Luzon Philippines Following an interdisciplinary approach the study charts the degradation and loss of forest in this area between 1950 and 1990 as it relates to the social and political context of logging forest migration and changes in upland agriculture Based on ten years of research the author introduces us to the actions livelihood options and motives of all the principal group of actors **Socioeconomic and Environmental Impacts of Biofuels** Alexandros Gasparatos, Per Stromberg, 2012-08-06 Biofuels are currently in the middle of a heated academic and public policy debate Biofuel production has increased fivefold in the past decade and is expected to further double by 2020 Most of this expansion will happen in developing nations This volume is the first of its kind providing a comprehensive overview of the biofuel debate in developing countries The chapters are written by a multidisciplinary team of experts exposing the key drivers and impacts of biofuel production and use The book covers impacts as diverse as air pollution biodiversity loss deforestation energy security food security greenhouse gas emissions land use change rural development water consumption and other socioeconomic issues Its wide focus accommodates examples from countries in Africa America and Asia As such this book will become an indispensable companion to academics practitioners and policy makers who wish to know more about biofuel issues in the developing world World Forests from Deforestation to Transition? Matti Palo, Heidi Vanhanen, 2000 This book addresses global and subnational issues concerning the world's forests societies and environment from an independent and non governmental point of view Cooperation on a global scale is not only commendable it is essential if solutions to the problems facing the world's forests are to be found To achieve this modern

science needs to draw a clearer picture of relationships between forests human activity and the environment and of the consequences of environmental change for the societies development and growth There are several partly intermingled evolutionary forest transitions underway the slow transition from forest area decrease to an increase in the North while deforestation and degradation continues in the South Although not all deforestation is considered negative serious social economic and environmental costs may be associated with excessive deforestation Deforestation control is just the first step on the stony path towards sustainable forest management The forest management transition refers to the shift in the utilization towards managed semi natural secondary forests and plantation forests There are some signs in the North of the forest paradigm shift from sustainable yield to forest ecosystem concepts How deforestation can be tackled and how these concurrent transitions are effected will have profound implications for the future These processes involve several challenges with South North dimensions A search for an optimum mix of public policies and markets is a global priority both as a forest policy issue and as an inter sectoral item on the political agenda Deforestation and transition is discussed here by a team of 14 scientists from both the North and the South This book offers knowledge facts and information about world forests society and environment to help us towards equity in our use of the global forest to create a clearer vision of unasyuva The Handbook of Global Climate and Environment Policy Robert Falkner,2016-09-26 The Handbook of Global Climate and Environment Policy presents an authoritative and comprehensive overview of global policy on climate and the environment It combines the strengths of an interdisciplinary team of experts from around the world to explore current debates and the latest thinking in the search for global environmental solutions Explores the environmental challenges we currently face and the concepts and approaches to solving these Questions the role of global actors institutions and processes and considers the links between global climate and environment policy and that of the global economy Highlights the connections between social science research and global policy Brings together authoritative coverage of recent research by internationally renowned experts from around the world including from North America Europe and Asia Provides an essential resource guide for students and researchers from across a wide range of related disciplines from politics and international relations to environmental sciences and sociology and for global policy practitioners Colonialism, Environment and Tribals in South India,1792-1947 Velayutham Saravanan,2016-08-12 This book offers a bird s eye view of the economic and environmental history of the Indian peninsula during colonial era It analyses the nature of colonial land revenue policy commercialisation of forest resources consequences of coffee plantations intrusion into tribal private forests and tribal controlled geographical regions and disintegration of their socio cultural political administrative and judicial systems during the British Raj It explores the economic history of the region through regional and non market economies and addresses the issues concerning local communities Comprehensive systematic and rich in archival material this book will be useful to scholars and researchers in history especially those concerned with economic and environmental history Integrated Protected Area

Management Michael Walkey, Ian R. Swingland, Shaun Russell, 2012-12-06 Protected areas have become an increasingly important tool both in the conservation of biodiversity and in revenue generation through sustainable use This is the only sure way to guarantee the protection necessary for many species habitats and ecosystems in the future Integrated Protected Area Management features contributions that consider the design management and sustainable use of these regions Three principal aspects are considered the theory and practice of designation community based conservation and the concept of sustainability identifying priorities for management The emphasis throughout is on the importance of an interdisciplinary approach to planning and the active involvement of all stakeholders in decision making processes as a means of ensuring long term sustainability **GIS for Environmental Decision-Making** Andrew A. Lovett, Katy Appleton, 2007-11-19

Environmental applications have long been a core use of GIS However the effectiveness of GIS based methods depends on the decision making frameworks and contexts within which they are employed GIS for Environmental Decision Making takes an interdisciplinary look at the capacities of GIS to integrate analyze and display data on which decisions **The Root**

Causes of Biodiversity Loss Alexander Wood, Pamela Stedman-Edwards, Johanna Mang, 2013-11-05 The world is losing species and biodiversity at an unprecedented rate The causes go deep and the losses are driven by a complex array of social economic political and biological factors at different levels Immediate causes such as over harvesting pollution and habitat change have been well studied but the socioeconomic factors driving people to degrade their environment are less well understood This book examines the underlying causes It provides analyses of a range of case studies from Brazil Cameroon China Danube River Basin India Mexico Pakistan Philippines Tanzania and Vietnam and integrates them into a new and interdisciplinary framework for understanding what is happening From these results the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends It makes a contribution to the understanding of all those from ecologists and conservationists to economists and policy makers working on one of the major challenges we face Biodiversity and Ecological Economics Luca

Tacconi, 2017-09-25 It is vital that we adopt interdisciplinary approaches such as ecological economics to gain an understanding of the values that determine human interaction with and use and abuse of the environment This book is a model of applied ecological economics It presents an accessible introduction to the subject while at the same time broadening its theoretical basis by introducing a post positivist participatory method The theoretical framework is applied to case studies in biodiversity conservation drawn from around the world and a range of different ecosystems The book is a suitable textbook for students of ecological economics and an ideal introduction for scientists and environmentalists needing to understand the role of economics in ecology and conservation Overexploitation or Sustainable Management? Patterns of the Tropical Timber Industry Imme Scholz, 2018-10-24 The part played by the Brazilian tropical timber industry in deforesting the Amazon region has not been studied very much This book describes the expansion of the timber industry in

the Brazilian federal state of Para since the 1960s when Amazon development became an important item on the government's agenda

The Terrestrial Biosphere S.T. Trudgill, 2014-09-25 Terrestrial Biosphere tries to pose the questions which underlie the many sided debate of how to respond to and influence change How should we view nature What do we do for the best how should we act what are we trying to achieve and what should we be guided by In doing so the book introduces and attempts to analyse not only scientific aspects of the debate but also cultural attitudes and values the notions of ecosystem stability are now challenged and it is also clear that ecosystems are renewable but not repeatable It finds that prescriptive solutions based on current constructs may not be adequate Feeling that analysis should lead to advocacy the author believes that if we can't improve predictability we have to increase adaptability which means that ecological and social capacity building should be advocated This is seen in terms of concepts institutions attitudes and values which allow for a plurality of meanings and which can cope with surprise and unforeseen change and which also facilitates responses to change

Deforestation and Reforestation in Namibia Emmanuel Kreike, 2009-10-26 Descriptions of the late 1800s landscape in the Ovambo floodplain in north central Namibia closely match the area's late 1900s appearance suggesting that little change occurred between the pre colonial baseline and the postcolonial outcome Yet paradoxically colonial conquest population pressure biological invasions new technology and economic globalization caused both dramatic deforestation and reforestation in less than a century The paradox stems from the fact that the prevailing global environmental models obscure and homogenize the process of environmental change different and contradictory interpretations are dismissed as alternative readings or misreadings of the same process Deforestation and Reforestation however argues that the paradox highlights the need to reframe environmental change as plural processes occurring along multiple trajectories that may be dissynchronized and asymmetrical

Carbon Dioxide Mitigation in Forestry and Wood Industry Gundolf H. Kohlmaier, Michael

Weber, Richard A. Houghton, 2013-06-29 The Intergovernmental Panel on Climate Change IPCC has recently summarized the state of the art in research on climate change Climate Change 1995 The most up to date research findings have been divided into three volumes the Science of Climate Change working group I the Impacts Adaptation and Mitigation of Climate Change working group II and the Economic and Social Dimensions of Climate Change working group III There is a general consensus that a serious change in climate can only be avoided if the future emissions of greenhouse gases are reduced considerably from the business as usual projection and if at the same time the natural sinks for greenhouse gases in particular that of CO₂ are maintained at the present level or preferably increased Forests forestry and forestry industry are important parts of the global carbon cycle and therefore they are also part of the mitigation potentials in at least a threefold way 1 During the time period between 1980 and 1989 there was a net emission of CO₂ from changes in tropical land use mostly tropical deforestation of 2.16 GtC a but at the same time it was estimated that the forests in the northern hemisphere have taken up 0.505 GtC a and additionally other terrestrial sinks including tropical forests where no clearing took place have been a

carbon sink of the order of 131

Green Development W. M. Adams, 2003-09-02 This revised and updated new edition retains the clear and powerful argument which characterized the original It gives a valuable analysis of the theory and practice of sustainable development and suggests that at the start of the new millennium we should think radically about the challenge of sustainability Fully revised this latest edition includes further reading chapter outlines chapter summaries and new discussion topics and explores the roots of sustainable development thinking and its evolution in the last three decades of the twentieth century the dominant ideas within mainstream sustainable development the nature and diversity of alternative ideas about sustainability the problems of environmental degradation and the environmental impacts of development strategies for building sustainability in development from above and below Offering a synthesis of theoretical ideas on sustainability based on the industrialized economies of the North and the practical applied ideas in the South which tend to ignore First World theory this important text gives a clear discussion of theory and extensive practical insights drawn from Africa Latin America and Asia

Integrated Natural Resource Management Bruce Morgan Campbell, Jeffrey Sayer, 2003 This book which contains 15 separately authored chapters discusses both the principles and applications of an integrated approach to natural resource management Such an approach must embrace the complexity of systems and redirect research towards the greater inclusion of issues such as participatory approaches multi scale analysis and an array of tools for system analysis information management and impact assessment Case studies particularly from developing countries in Asia Africa and Latin America are included This book is of interest to a wide range of readers in many disciplines including forestry soil and management sciences agriculture and development studies

Forest Politics David Humphreys, 2014-04-08 An important and timely book from the Foreword by Stanley Johnson A complete and absorbing history of a decade of intense international politics offers many insights for future negotiators of sustainable solutions Stephen Bass International Institute for Environment and Development Skillfully navigates the jungle of forest politics leaving us in no doubt that the verbal commitment to save the world's forests has yet to be translated into action on the ground The way forward must clearly lie in political commitments and international cooperation if forests are to continue to preserve life on Earth Francis Sullivan World Wide Fund for Nature Global deforestation and its attendant processes including soil degradation climate change and the loss of biological diversity emerged as international political issues during the 1980s prompting politicians to seek consensus on programmes and policies for the conservation and sustainable management of forests Yet global initiatives have been bedevilled by tensions between the North and South and between governments industry local communities and indigenous peoples Meanwhile rates of deforestation in the tropics are increasing and international political efforts are demonstrably failing Forest Politics carefully traces the evolution of international cooperation on forests from the inception of the controversial International Tropical Timber Organization and the failed Tropical Forestry Action Programme in the mid 1980s to the creation of the Intergovernmental Panel on Forests in

the mid 1990s The book also provides a detailed analysis of the negotiating stances of the parties involved in the divisive negotiations that took place prior to the 1992 Earth Summit in Rio de Janeiro and the equally factious negotiations for the International Tropical Timber Agreement of 1994 It provides a fascinating insight into the nature of such processes illustrating the difficulties that arise when concepts such as global commons come into conflict with national sovereignty Complete with annexes of important political documents and making extensive use of primary source material and interviews with participants Forest Politics presents case studies of all the major forest negotiations over the last 13 years It is an essential reference point for policy makers environmental campaigners and students and required reading for all those who care about the future of the world's forests David Humphreys is Research Fellow in Global Environmental Change at the Open University Originally published in 1996

The Environment Chris C. Park, 2001 The second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition providing a comprehensive account of modern environmental issues and the physical and socio economic framework in which they are set It explains the principles and applications of the different parts of the Earth's system the lithosphere atmosphere hydrosphere and the biosphere and explains the interrelationships within and between these systems It explores the present environmental crisis examines how the planet Earth fits into the wider universe and explores human environment interactions
