Cropley, 2015-07-22 In today's highly competitive market organizations increasingly need to innovate in order to survive Drawing on a wealth of psychological research in the field of creativity David H Cropley and Arthur J Cropley illustrate practical methods for conceptualizing and managing organizational innovation They present a dynamic model of the interactions between four key components of creativity product person process and press which function as building blocks of innovation This volume sheds new light on the nature of innovative products and the processes that generate them the psychological characteristics of innovative people and the environments that facilitate innovation It also fills a significant gap in the current literature by addressing the paradoxical quality of organizational innovation which may be both helped and hindered by the same factors The authors demonstrate that with proper measurement and management organizations can effectively encourage individuals to produce and take advantage of novel ideas

Race, Racism and Psychology Graham Richards, 2003-09-02 Topics with racial implications have been hotly debated in the psychological literature for most of this century and are often in the news Graham Richards takes a historical look at how the concepts of race and racism emerged within the discipline and charts the underlying premises of some famous studies in their social and political contexts No one is allowed to be objective in this arena as opponents will always argue that they are not This account is bound therefore to be

controversial and excite interest whether or not readers agree with Richards stance *A Daoist Theory of Chinese Thought* Chad Hansen,2000-08-17 This ambitious book presents a new interpretation of Chinese thought guided both by a philosopher's sense of mystery and by a sound philosophical theory of meaning That dual goal Hansen argues requires a unified translation theory It must provide a single coherent account of the issues that motivated both the recently untangled Chinese linguistic analysis and the familiar moral political disputes Hansen's unified approach uncovers a philosophical sophistication in Daoism that traditional accounts have overlooked **Ontology after Philosophical Psychology** Michela Bella,2019-08-21 Ontology after Philosophical Psychology addresses the question of William James's continuity of consciousness with a view to its possible actualizations In particular Michela Bella critically delineates James's discourse In the wake of Darwin's theory of evolution at the end of the nineteenth century James's reflections emerged in the field of physiological psychology where he developed for the case for a renewed epistemology and a new metaphysical framework to help us understand the most interesting theories and scientific discoveries about the human mind Bella's analysis of the theme of continuity makes it possible to appreciate both historically and theoretically the importance of James's gradual transition from making observations of experimental psychology on the continuity of thought to developing an epistemological and ontological argument that continuity is a characteristic of experience and reality This analysis makes it possible both to clarify James's position in relation to his historical context and to highlight the most original results of his work Psychology Library Editions: History of Psychology Various,2021-08-19 Originally published between 1928 and 1987 the volumes in this set provide an interesting look back at how psychology has developed as a discipline and some of the problems it has encountered along the way It includes volumes focusing on the history of specific fields such as developmental and experimental psychology as well as examining the roots of psychological theory as a whole and how it has informed many of the fields of psychology we know today
