Toxic Exposures Contested Illnesses And The Environmental Health Movement:

Toxic Exposures Phil Brown, 2007-06-29 The increase in environmentally induced diseases and the loosening of regulation and safety measures have inspired a massive challenge to established ways of looking at health and the environment. Communities with disease clusters, women facing a growing breast cancer incidence rate, and people of color concerned about the asthma epidemic have become critical of biomedical models that emphasize the role of genetic makeup and individual lifestyle practices. Likewise, scientists have lost patience with their colleagues and government's failure to adequately address environmental health issues and to safeguard research from corporate manipulation. Focusing specifically on breast cancer, asthma, and Gulf War-related health conditions, contested illnesses that have generated intense debate in the medical and political communities, Phil Brown shows how these concerns have launched an environmental health movement that has revolutionized scientific thinking and policy. Before the last three decades of widespread activism regarding toxic exposures, people had little opportunity to get information. Few sympathetic professionals were available; the scientific knowledge base was weak; government agencies were largely unprepared; laypeople were not considered bearers of useful knowledge; and ordinary people lacked their own resources for discovery and action. Brown argues that organized social movements are crucial in recognizing and acting to combat environmental diseases. His book draws on environmental and medical sociology, environmental justice, environmental health science, and social movement studies to show how citizen science alliances have fought to overturn dominant epidemiological paradigms. His probing look at the ways scientific findings are made available to the public and the changing nature of policy offers a new perspective on health and the environment and the relationship among people, knowledge, power, and authority. **Handbook of Environmental**

Sociology Beth Schaefer Caniglia, Andrew Jorgenson, Stephanie A. Malin, Lori Peek, David N. Pellow, Xiaorui Huang, 2021-11-01 This handbook defines the contours of environmental sociology and invites readers to push boundaries in their exploration of this important subdiscipline. It offers a comprehensive overview of the evolution of environmental sociology and its role in this era of intensified national and global environmental crises. Its timely frameworks and high-impact chapters will assist in navigating this moment of great environmental inequality and uncertainty. The handbook brings together an outstanding group of scholars who have helped redefine the scope of environmental sociology and expand its reach and impact. Their contributions speak to key themes of the subdiscipline: inequality, justice, population, social movements, and health. Chapter topics include environmental demography, food systems, animals and the environment, climate change, disasters, and much more. The emphasis on public environmental sociology and the forward-thinking approach of this collection is what sets this volume apart. This handbook can serve as an introduction for students new to environmental sociology or as an insightful treatment that current experts can use to further their own research and publication. It will leave readers with a strong understanding of environmental sociology and the motivation to apply it to their work. Research

Ethics and Social Movements Kevin Gillan, Jenny Pickerill, 2016-04-14 What ethical challenges are faced by researchers studying social and political movements Should scholars integrate their personal politics and identities into their research What role should activists have in shaping the purposes or processes of social scientific research How do changing political contexts affect the ethical integrity of a research project over time These are some of the live issues of research ethics that face students and scholars whose research subjects are located in contentious political terrain The contributors to this volume expose their own ethical thinking as they have met such challenges head on Each explores real dilemmas of ethical practice on the ground as they carry out research on social movements across the globe Authors examining pro democracy activists in Malaysia sanctions breakers in the Gaza Freedom Flotilla environmental health organisations in North America and much else find that the narrow confines of Research Ethics Committees and Institutional Review Boards offer little guidance on the questions that really matter They offer instead a demonstration of continual reflexivity that is both personal and political in its approach This book opens up debate on research ethics delineating key challenges and offering hopeful and practical ways forward for real world ethical social science This book was published as a special issue of *Social Movement Studies*

Doom with a View Kristen Iversen, 2020-08-14 Tucked up against the Rocky Mountains just west of Denver sits the remnants of one of the most notorious nuclear weapons sites in North America Rocky Flats With a history of environmental catastrophes political neglect and community wide health crises this site represents both one of the darkest and most controversial chapters in our nation's history and also a conundrum on repurposing lands once considered lost As the crush of encroaching residential areas close in on this site and the generation of Rocky Flats workers passes on the memory of Rocky Flats is receding from the public mind yet the need to responsibly manage the site and understand the consequences of forty years of plutonium production and contamination must be a part of every decision for the land's future

Handbook of the Sociology of Health, Illness, and Healing Bernice A. Pescosolido, Jack K. Martin, Jane D. McLeod, Anne Rogers, 2010-12-17 The Handbook of the Sociology of Health Illness Healing advances the understanding of medical sociology by identifying the most important contemporary challenges to the field and suggesting directions for future inquiry The editors provide a blueprint for guiding research and teaching agendas for the first quarter of the 21st century In a series of essays this volume offers a systematic view of the critical questions that face our understanding of the role of social forces in health illness and healing It also provides an overall theoretical framework and asks medical sociologists to consider the implications of taking on new directions and approaches Such issues may include the importance of multiple levels of influences the utility of dynamic life course approaches the role of culture the impact of social networks the importance of fundamental causes approaches and the influences of state structures and policy making

Pesticide Drift and the Pursuit of Environmental Justice Jill Lindsey Harrison, 2011-07-29 An examination of political conflicts over pesticide drift and the differing conceptions of justice held by industry regulators and activists The widespread but virtually invisible

problem of pesticide drift the airborne movement of agricultural pesticides into residential areas has fueled grassroots activism from Maine to Hawaii Pesticide drift accidents have terrified and sickened many living in the country's most marginalized and vulnerable communities In this book Jill Lindsey Harrison considers political conflicts over pesticide drift in California using them to illuminate the broader problem and its potential solutions The fact that pesticide pollution and illnesses associated with it disproportionately affect the poor and the powerless raises questions of environmental justice and political injustice Despite California's impressive record of environmental protection massive pesticide regulatory apparatus and booming organic farming industry pesticide related accidents and illnesses continue unabated To unpack this conundrum Harrison examines the conceptions of justice that increasingly shape environmental politics and finds that California's agricultural industry regulators and pesticide drift activists hold different and conflicting notions of what justice looks like Drawing on her own extensive ethnographic research as well as in depth interviews with regulators activists scientists and public health practitioners Harrison examines the ways industry regulatory agencies and different kinds of activists address pesticide drift connecting their efforts to communitarian and libertarian conceptions of justice The approach taken by pesticide drift activists she finds not only critiques theories of justice undergirding mainstream sustainable agriculture activism but also offers an entirely new notion of what justice means To solve seemingly intractable environmental problems such as pesticide drift Harrison argues we need a different kind of environmental justice She proposes the precautionary principle as a framework for effectively and justly addressing environmental inequities in the everyday work of environmental regulatory institutions
