prototypes and production aircraft to check compliance with the CAA's flight safety requirements. The scope ranged from single engine light aircraft to large civil transport aircraft. It involved frequent visits to foreign manufacturers and also included his participation in the CAA's Concorde certification flight test programme. Flight testing involves risk. Advancements in the understanding of aerodynamics and an increasingly professional approach to risk management improved safety but it would never be risk free. Several of the author's close friends and colleagues died in flight test accidents during this period of rapid aeronautical development all on civil aircraft types. It is because of such people that the millions of flights undertaken each year are trouble free.
