Vehicle-to-Vehicle and Vehicle-to-Infrastructure Communications Fei Hu, 2018-02-20 This book focuses on the most critical technical aspects of vehicle to vehicle V2V and vehicle to infrastructure V2I communications It covers the smart city concept and architecture and explains how V2V and V2I fit into it It describes the wireless communication protocols for V2V and V2I It then explains the hardware design process for vehicle communication transceiver and antenna systems It explains next generation wireless technologies and their requirements for vehicle communication protocols Case studies provide the latest V2V and V2I commercial design details Finally it describes how to implement vehicle communication protocol from practical hardware design angle

Encyclopedia of Business Analytics and Optimization Wang, John, 2014-02-28 As the age of Big Data emerges it becomes necessary to take the five dimensions of Big Data volume variety velocity volatility and veracity and focus these dimensions towards one critical emphasis value The Encyclopedia of Business Analytics and Optimization confronts the challenges of information retrieval in the age of Big Data by exploring recent advances in the areas of knowledge management data visualization interdisciplinary communication and others Through its critical approach and practical application this book will be a must have reference for any professional leader analyst or manager interested in making the most of the knowledge resources at their disposal

Mathematics - Key Technology for the Future Willi Jäger, Hans-Joachim Krebs, 2008-04-10 This book is about the results of a number of projects funded by the BMBF in the initiative Mathematics for Innovations in Industry and Services It shows that a broad spectrum of analytical and numerical mathematical methods and programming techniques are used to solve a lot of different specific industrial or services problems The main focus is on the fact that the mathematics used is not usually standard mathematics or black box mathematics but is specifically developed for specific industrial or services problems Mathematics is more than a tool box or an ancillary science for other scientific disciplines or users Through this book the reader will gain insight into the details of mathematical modeling and numerical simulation for a lot of industrial applications

Development and Evaluation of a Calibration and Validation Procedure for Microscopic Simulation Models Brian Park, 2004 Microscopic traffic simulation models have been widely accepted and applied in transportation engineering and planning practice for the past decades because simulation is cost effective safe and fast To achieve high fidelity and credibility for a traffic simulation model

calibration and validation are of utmost importance Most calibration efforts reported in the literature have focused on the informal practice with a specific simulation model but seldom did they propose a systematic procedure or guideline for simulation model calibration and validation The purpose of this study was to develop and evaluate a procedure for microscopic simulation model calibration and validation Three widely used microscopic traffic simulation models VISSIM PARAMICS and CORSIM were selected for model review and practice of model calibration and validation The validity of the proposed procedure was evaluated and demonstrated via two case studies including an actuated signalized intersection and a 5 mile freeway segment with a lane closure work zone The simulation results were compared against the field data to determine the performance of the calibrated models The proposed procedure yielded acceptable results for all applications thus confirming that it was effective for the different networks and simulation models used in the study Although the calibrated parameters generated the performance measures that were representative of the field conditions the simulation results of the default parameters were significantly different from the field data

Environmentally Conscious Transportation Myer Kutz, 2008-03-03 The fifth volume of the Wiley Series in Environmentally Conscious Engineering Environmentally Conscious Transportation provides a foundation for understanding and implementing methods for reducing the environmental impact of a wide range of transportation modes from private automobiles with a separate chapter on biofuels to heavy trucks and buses to rail and public transportation systems to aircraft Each chapter has been written by one or more experts who based on their hands on field experience present relevant practical and analytic techniques for enhancing the integrity and reliability of transportation vehicles and infrastructure as well as for measuring and limiting the pollution caused by transportation activities Moreover the book explains how to satisfy key business objectives such as maximizing profits while meeting environmental objectives

Intersections Control and Safety Antonio Pratelli, 2013-05-22 Starting off a new series on Transport Systems and Traffic Engineering the book aims to help bridge the gap between research and practice encouraging a critical dialogue in different specific subjects spanning innovation development and technology transfer Those who offer innovation often do not meet the immediate needs of practitioners especially in the traditional field of civil engineering Still the adequate diffusion of research results and wisdom derived from practical experience are crucial to both theoretical underpinnings and technical applications The papers forming this book are devoted to intersection control and safety and have been selected bearing in mind the criteria stated above That is these papers provide both scholarly contribution as well as vision for application As a general rule about one third of all highway crashes happen at intersections This rule holds for many different countries Intersection crashes also represent a significant portion of serious injury crashes and by right are receiving considerable attention from researchers and practitioners alike This book is therefore devoted to relevant safety aspects of road intersections and innovative features in design and operations that may address the intersection crash problem The thirteen papers are more or less equally devoted to

roundabouts and signals These papers cover many of the most recent and emerging issues related to intersection control and safety Topics range from design details to driver perception from pedestrians behaviour to signal timing and from capacity models to red light running The book will be useful for those wishing to expand their knowledge of this ever important subject area *Handbook on Mobile and Ubiquitous Computing* Laurence T. Yang,Evi Syukur,Seng W. Loke,2016-04-19 Written for those familiar with the basics and active in the area of mobile and ubiquitous computing this volume contains papers that aid in understanding key issues and problems being tackled in the field This text illustrates the design implementation and deployment of mobile and ubiquitous systems particularly on mobile and ubiquitous environments concepts modeling database components and wireless infrastructures It discusses new trends towards intelligent systems that aim to create software systems and discusses sensory input and multimedia information The chapters also cover security privacy and trust
