Wrong David H. Freedman,2011-07-07 Our investments are devastated obesity is epidemic blue chip companies circle the drain and popular medications turn out to be ineffective and even dangerous What happened Didn t we listen to the scientists economists and other experts who promised us that if we followed their advice all would be well Actually those experts are a big reason we re in this mess Their expert counsel usually turns out to be wrong often wildly so WRONG reveals the dangerously distorted ways experts come up with their advice and why the most heavily flawed conclusions end up getting the most attention all the more so in the online era But there s hope WRONG spells out the means by which every individual and organization can do a better job of unearthing the crucial bits of right within a vast avalanche of misleading pronouncements **The Role of Trust in Judgment** Christophe Sage Hudspeth,2009 ABSTRACT In this dissertation I defend five claims about trust 1 trusting and trustworthiness are conceptually but not causally connected 2 trust is risky 3 trust requires good will 4 trust is a two part relation and 5 trust is an interpretative framework A concern for trust often appears in discussions about testimony and the expectation of truthfulness Bentley Glass John Hardwig and Jonathan Adler each address the role of trust in science while assuming a necessary connection between trusting and trustworthiness I

argue that this conception is untenable because a justification for one fails to suffice as a justification of the other I show instead that it is our assessment that links trustworthiness to trusting My second claim that trust involves risk is contentious I argue that the common understanding of risk as harm which is held by Russell Hardin contains the more technical understanding of risk as uncertainty which is suggested by Niklas Luhman Trust is risky precisely because it is inherently uncertain Annette Baier argues that failing to recognize a distinction between trusting and action associated with that trust leads us to accept accounts of trust that are too broad I argue that trust is to believe that another is concerned with your well being has good will because she is concerned about you and not that it will necessarily benefit her in some way Seeing trust as good will allows me to advance my fourth claim that trust is a two part relation because trust is the assessment of another's good will towards me Trusting another is believing that the other's good judgment will include concern and consideration for my interests because they are my interests My fifth point follows naturally once trust is understood to be a risky two part relation requiring good will it is an interpretive framework Our trust in another sets the tone for understanding her behavior such that we take her actions as either supporting or blocking our interests This account takes the capacity to trust to be the foundation for rather than merely an outgrowth of our judgments *The Logic and Limits of Trust* Bernard Barber, 1983
