The solar library used by solar position calculators, solar simulation software and solar contour calculators include machine program code for the solar hardware controller which are software programmed into Micro controllers, Programmable Logic Controllers, PLC, programmable gate arrays, Arduino processor or PIC processor. PC based solar tracking is also high in demand using C, Visual Basic, VB as well as MS Windows, Linux and Apple Mac based operating systems for sun path tables on Matlab, Excel. Some books and internet webpages use other terms such as sun angle calculator, sun position calculator or solar angle calculator. As said, such software code calculate the solar azimuth angle, solar altitude angle, solar elevation angle or the solar Zenith angle. Zenith solar angle is simply referenced from vertical plane, the mirror of the elevation angle measured from the horizontal or ground plane level. Similar software code is also used in solar calculator apps or the solar power calculator apps for IOS and Android smartphone devices. Most of these smartphone solar mobile apps show the sun path and sun angles for any location and date over a 24 hour period. Some smartphones include augmented reality features in which you can physically see and look at the solar path through your cell phone camera or mobile phone camera at your phone's specific GPS location. In the computer programming and digital signal processing DSP environment, free open source program code are available for VB, Net, Delphi, Python, C, C++, C#, Swift, ADM, F, Flash, Basic, QBasic, GBasic, KBasic, SIMPL language, Squirrel, Solaris, Assembly language on operating systems such as MS Windows, Apple Mac, DOS or Linux OS. Visual Culture and the Forensic David Houston Jones,2022-03-10 David Houston Jones builds a bridge between practices conventionally understood as forensic such as crime scene investigation and the broader field of activity which the forensic now designates for example in performance and installation art as well as photography Contemporary work in these areas responds both to forensic evidence including crime scene photography and to some of the assumptions underpinning its consumption It asks how we look and in whose name foregrounding and scrutinising the enduring presence of voyeurism in visual media and instituting new forms of ethical engagement Such work responds to the object oriented culture associated

with the forensic and offers a reassessment of the relationship of human voice and material evidence It displays an enduring debt to the discursive model of testimony which has so far been insufficiently recognised and which forms the basis for a new ethical understanding of the forensic Jones s analysis brings this methodology to bear upon a strand of contemporary visual activity that has the power to significantly redefine our understandings of the production analysis and deployment of evidence Artists examined include Forensic Architecture Simon Norfolk Melanie Pullen Angela Strassheim John Gerrard Julian Charri re Trevor Paglen Laura Poitras and Sophie Ristelhueber The book will be of interest to scholars working in art history visual culture literary studies modern languages photography and critical theory **Nuts & Volts** ,2005
