Christophe Kolski, Jean Vanderdonckt, 2012-12-06 Advances in electronics communications and the fast growth of the Internet have made the use of a wide variety of computing devices an every day occurrence These computing devices have different interaction styles input output techniques modalities characteristics and contexts of use Furthermore users expect to access their data and run the same application from any of these devices Two of the problems we encountered in our own work 2 in building VIs for different platforms were the different layout features and screen sizes associated with each platform and device Dan Ol sen 13 Peter Johnson 9 and Stephen Brewster et al 4 all talk about problems in interaction due to the diversity of interactive platforms devices network services and applications They also talk about the problems associated with the small screen size of hand held devices In comparison to desk top computers hand held devices will always suffer from a lack

of screen real estate so new metaphors of interaction have to be devised for such devices. It is difficult to develop a multiplatform user interface without duplicating development effort. Developers now face the daunting task to build UIs that must work across multiple devices. There have been some approaches towards solving this problem of multiplatform UI development including XWeb [14]. Building plastic interfaces [5, 20] is one such method in which the UIs are designed to withstand variations of context of use while preserving usability.

Tools for Working with Guidelines

Jean Vanderdonckt, Christelle Farenc, 2012-12-06 This volume contains the papers presented at the International Workshop on Tools for Working with Guidelines (TFWWG 2000) held in Biarritz, France, in October 2000. It is the final outcome of the International Special Interest Group on Tools for Working with Guidelines. Human-computer interaction guidelines have been recognized as a uniquely relevant source for improving the usability of user interfaces for interactive systems. The range of interactive techniques exploited by these interactive systems is rapidly expanding to include multimodal user interfaces, virtual reality systems, highly interactive web-based applications, and three-dimensional user interfaces. Therefore, the scope of guidelines sources is rapidly expanding as well, and so are the tools that should support users who employ guidelines to ensure some form of usability. Tools For Working With Guidelines (TFWWG) covers not only software tools that designers, developers, and human factors experts can use to manage multiple types of guidelines, but also looks at techniques addressing organizational, sociological, and technological issues.

Human-Computer Interaction

Brad Blumenthal, Juri Gornostaev, Claus Unger, 1994-10-26 This volume presents the proceedings of the Fourth East-West Conference on Human-Computer Interaction (EWHCI 94) held in St. Petersburg, Russia, in August 1994. One of the main objectives of EWHCI is to foster professional and personal contacts between researchers in the former Soviet Union and researchers from the rest of the world. The volume contains revised versions of the 20 best papers selected from the 37 papers accepted for presentation at the conference and covers three basic themes: theoretical and empirical underpinnings of HCI, implemented systems, and the relationship of HCI to other fields. The papers are organized in sections on foundations of HCI, empirical studies, and applications, environments, architectures, learning and teaching, and hypertext.
