Adaptive Hypermedia and Adaptive Web-Based Systems Wolfgang Nejdl, Judy Kay, Pearl Pu, Eelco Herder, 2008-07-30 Adaptive Hypermedia has emerged as an important area of both academic and deployed research. It encompasses a broad range of research that will enable personalized adaptive hypermedia systems to play an even more effective role in people's lives. The Web has enabled the widespread use of many personalized systems such as recommenders, personalized filters, and retrieval systems, e-learning systems, and various forms of collaborative systems. Such systems have been widely deployed in diverse domains such as e-Commerce, e-Health, e-Government, digital libraries, personalized travel planning, as well as tourist and cultural heritage services. They are particularly promising for users with special needs. The exciting possibilities of such deployed adaptive hypermedia systems rely on research progress in a broad range of areas such as user profiling and modeling, acquisition, updating, and management of user models, group modeling, and community-based profiling, recommender systems, and recommendation strategies, data mining for personalization, the Semantic Web, adaptive multimedia content authoring and delivery, ubiquitous computing environments, and Smart Spaces, personalization for the plethora of mobile devices such as PDAs, mobile phones, and other hand-held devices, and pragmatics such as privacy, trust, and security. Empirical studies of adaptive hypermedia and Web systems are also critical to informing future directions. The

Adaptive Hypermedia conferences have become the major forums for the scientific exchange and presentation of research results on adaptive hypermedia and adaptive Web-based systems. **TomTom VIA 1625TM 6 Inch GPS Navigation Device with Free Lifetime Traffic and Maps of North America, Advanced Lane Guidance and Spoken Directions User's Manual**
