Variants Of Evolutionary Algorithms For Real World Applications:

Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong, Thomas Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book Variants of Evolutionary Algorithms for Real World Applications aims to promote the practitioner s view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation

Real-life Applications with Membrane Computing Gexiang Zhang, Mario J. Pérez-Jiménez, Marian Gheorghe, 2017-04-05 This book thoroughly investigates the underlying theoretical basis of membrane computing models and reveals their latest applications In addition to date there have been no illustrative case studies or complex real life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus gaps that this book remedies By studying various complex applications including engineering optimization power systems fault diagnosis mobile robot controller design and complex biological systems involving data modeling and process interactions the book also extends the capabilities of membrane systems models with features such as formal verification techniques evolutionary approaches and fuzzy reasoning methods As such the book offers a comprehensive and up to date guide for all researchers PhDs and undergraduate students in the fields of computer science engineering and the bio sciences who are interested in the applications of natural computing models
