Transportation Decision Making Principles Of Project Evaluation And Programming:

Transportation Decision Making Kumares C. Sinha, Samuel Labi, 2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation; estimating travel demand and costing transportation projects; Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs; Evaluating a project's impact on economic development and land use as well as its impact on society and culture; Assessing a project's environmental impact including air quality, noise, ecology, water resources, and aesthetics; Evaluating alternative projects on the basis of multiple performance criteria; Programming transportation investments so that resources can be optimally allocated to meet facility specific and system wide goals. Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decisionmaking. Given that billions of dollars are spent each year on transportation systems in the United States alone and that there is a need for thorough and rational evaluation and decision making for cost effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation. Reliable

Decision-Making for Sustainable Transportation Gholamreza Haseli, Mostafa Hajiaghahi-Keshteli, Sarbast Moslem, 2025-08-22 Reliable Decision Making for Sustainable Transportation explores decision making methods that incorporate expert and decision maker opinions for improved reliability. The book examines fuzzy sets that capture ambiguity and enable a more comprehensive analysis of stakeholder perspectives focusing on transportation case studies to demonstrate techniques for weighing criteria, ranking alternatives, and selecting optimal and reliable decisions. It seeks to advance transportation planning, traffic engineering, road safety, and sustainability by integrating state of the art decision support systems that leverage AI and multiple stakeholder viewpoints. This approach will benefit researchers and professionals across transportation decision sciences, supply chain management, and operations looking for innovative ways to model uncertainty and decision maker reliability, and providing methodologies and frameworks for more robust group decisions. Introduces reliability concepts in decision making providing insights into the robustness of strategic choices for sustainable

transportation Presents practical case studies within the transportation sector to illustrate the application of reliability principles in decision making offering tangible solutions to everyday challenges Provides reliable strategies for existing public transportation systems considering the unique challenges faced by investment departments and engineers in the planning process

Transportation Planning Handbook ITE (Institute of Transportation Engineers), Michael D.
