Value Stream Mapping for Lean Development Drew A. Locher, 2008-05-02 Written by one of the world's most respected consultants on Lean, this work presents a methodology for value stream mapping that is appropriate for any organization, whether it be service or product oriented. Over the past 25 years, Locher has proven just how powerful this process is, having employed it in healthcare, transportation, distribution, education, financial services, and manufacturing environments. Illustrating his methodology through the example of the imaginary DevelopTek company, he explains how to: Identify development waste; Assess an organization's current state and develop a Current State Map; Apply Lean principles to create a Future State Map. *Lean Administration: From Value Stream Mapping (Vsm) to Service Stream Mapping (Ssm)* David Meyner, 2019-02-11 This Business Excellence manual describes in a practical way concrete steps and examples to create a value stream analysis in the production area as well as a value stream analysis in the administrative area. This manual is not theoretical; it's written from practitioners for practitioners. It describes step by step the process for implementation of a value stream analysis and service stream analysis. For this purpose, the systematics from the production area were transferred graphically and comprehensibly to the administrative area. Lean administration has recently become increasingly important for companies to optimize their administration area to create transparency and sustainability in their daily work processes. Hereby, service stream mapping is a very useful tool. This manual gives the reader concrete implementation instructions and is suitable for both practitioners and students to understand the systematics of value stream mapping and service stream mapping in a short time. Learning to See Mike Rother, John Shook, 2003 Senior experts within the Toyota Production System often draw maps when on the shop floor. These maps show the current physical flow of a product family and the information flow for that product family as they wind through a complex facility making many products. Much more important, these simple maps, often drawn on a scrap of paper, show where steps can be eliminated, flows smoothed, and pull systems introduced in order to create a truly lean value stream for each product family. In 1998, John Shook and Mike Rother of the University of Michigan wrote down Toyota's mapping methodology for the first time in *Learning to See*. This simple tool makes it possible for you to see through the clutter of a complex plant. You'll soon be able to identify all the processing steps along the path from raw materials to finished goods for each product, and all of the information flows going back from the customer through the plant and upstream to suppliers. With this knowledge in hand, it is much easier to envision a future state for each product family in which wasteful actions are eliminated and production can be pulled smoothly ahead by the customer. In plain language with detailed drawings, this workbook explains everything you will need to create accurate current state and future state maps for each of your product families and then turn the current state into the future state rapidly and sustainably. In *Learning to See*, you will find a foreword by Jim Womack and Dan Jones explaining the need for this tool. An introduction by Mike Rother and John Shook describes how they discovered the mapping tool in their study of
