Unsaturated Zone Modeling Progress Challenges And Applications Wageningen Ur Frontis Series:

Unsaturated-zone Modeling R.A. Feddes, G.H. de Rooij, J.C. van Dam, 2004-10-11 Mankind has manipulated the quantity and quality of soil water for millennia Food production was massively increased through fertilization irrigation and drainage But malpractice also caused degradation of immense areas of once fertile land rendering it totally unproductive for many generations In populated areas the pollutant load ever more often exceeds the soil's capacity for buffering and retention and large volumes of potable groundwater have been polluted or are threatened to be polluted in the foreseeable future In the past decades the role of soil water in climate patterns has been recognized but not yet fully understood The soil science community responded to this diversity of issues by developing numerical models to simulate the behavior of water and solutes in soils These models helped improve our understanding of unsaturated zone processes and develop sustainable land management practices Aimed at professional soil scientists soil water modelers irrigation engineers etc this book discusses our progress in soil water modeling Top scientists present case studies overviews and analyses of strengths weaknesses opportunities and threats related to soil water modeling The contributions cover a wide range of spatial scales and discuss fundamental aspects of unsaturated zone modeling as well as issues related to the application of models to real world problems

Precision Agriculture: Modelling Davide Cammarano, Frits K. van Evert, Corné Kempenaar, 2023-01-03 This book describes how models are used to monitor crops and soils in precision agriculture and how they are used to support farmers' decisions The introductory section starts with an overview of precision agriculture from the early days of yield monitoring in the 1980s to the present with a focus on the role of models The section continues with descriptions of the different kinds of models and the opportunities for their application in precision agriculture The section concludes with a chapter on socio-economic drivers and obstacles to the adoption of precision agriculture technologies The middle section of the book explores the state of the art in modeling for precision agriculture Individual chapters focus on the major processes in precision agriculture water use nitrogen and other amendments as well as weeds pests and diseases The final section contains a series of short chapters that each describe a commercial model based service that is currently available to farmers The book aims to provide useful information to graduate level professionals that want to broaden their knowledge of precision agriculture to scientists who want to learn about using academic knowledge in practical farming and to farmers farm consultants and extension workers who want to increase their understanding of the science behind some of the commercial software available to the farming community

Progress in Water Footprint Assessment Arjen Y. Hoekstra, Ashok K. Chapagain, Pieter Van Oel, 2019-06-24 Water Footprint Assessment is a young research field that considers how freshwater use scarcity and pollution relate to consumption production and trade patterns This book presents a wide range of studies within this new field It is argued that collective and coordinated action at different scale levels and along all stages of commodity supply chains is necessary to bring about more sustainable efficient and equitable water use The presented studies range from farm

to catchment and country level and show how different actors along the supply chain of final commodities can contribute to more sustainable water use in the chain **Pathways to High-Tech Valleys and Research Triangles** Willem Hulsink, J. J. M. Dons, 2008-05-23 About the book The contents of most of the chapters included in this volume were originally presented and discussed during the academic workshop High tech Valleys and Research Triangles in the East of the Netherlands and elsewhere held on 30 November and 1 December 2005 at the Wageningen International Congress Centre WICC in the Netherlands At that time we had an informal agreement with Rob Bogers series editor of the Wageningen UR Frontis book series that if the quality and quantity of the talks and papers at the seminar would be sufficient and if there was willingness among the potential authors an edited book volume based upon the results of the workshop would be a possibility After the workshop when we had a critical mass of ten chapters and a dedicated group of committed authors the book project was given the green light As editors we realized that there were still a couple of topics and themes missing and when we had found colleagues for these four additional chapters that needed to be written our Frontis book was on the roll Although most of the time it was great fun the whole process of writing reviewing rewriting editing and proofreading took a lot of time much more time than we originally had foreseen We would like to thank all authors of the fourteen chapters of this book for their excellent contributions *The Agro-Food Chains and Networks for Development* Ruerd Ruben, Maja Slingerland, Hans Nijhoff, 2006-04-06 Optimizing chain performance asks for cooperation between all agents involved in the supply chain

Handbook of Water Harvesting and Conservation Saeid Eslamian,Faezeh Eslamian,2021-04-09 Water

harvesting is gaining more and more recognition as the sustainable and resilient alternative to other water supply options. It is economically viable, socially compatible and environmentally friendly. Water harvesting has proven to be a robust solution to overcome or reduce water shortages all over the world. To apply this in a sustainable and effective way, it is important to understand exactly where it can be applied to make full use of its potential. The Handbook of Water Harvesting and Conservation Case Studies and Application Examples is the most comprehensive up-to-date and applied casebook on water harvesting and conservation yet published. The editors bring together the many perspectives into a synthesis that is both academically based and practical in its potential applications. The Handbook of Water Harvesting and Conservation Case Studies and Application Examples will be an important tool for education, research and technical works in the soil water and watershed management area and will be highly useful for drought strategy planning, flood management and adaptation to climate change in all urban, agricultural, forest, rangeland areas. *Principles of Soil and Plant Water Relations* M.B.

Kirkham, 2014-04-21. *Principles of Soil and Plant Water Relations* 2e describes the principles of water relations within soils followed by the uptake of water and its subsequent movement throughout and from the plant body. This is presented as a progressive series of physical and biological interrelations, even though each topic is treated in detail on its own. The book also describes equipment used to measure water in the soil-plant-atmosphere system. At the end of each chapter is a biography of a scientist whose principles are discussed in the chapter. In addition to new information on the concept of celestial time, this new edition also includes new chapters on methods to determine sap flow in plants, dual probe heat pulse technique to monitor water in the root zone. Provides the necessary understanding to address advancing problems in water availability for meeting ecological requirements at local, regional and global scales. Covers plant anatomy, an essential component to understanding soil and plant water relations. **New Approaches to the Economics of Plant Health** Alfons

Oude Lansink, 2007-04-17. The world trade of plants and plant products is gradually increasing in both quantity and variety. Also, as more and more citizens are nowadays travelling to distant destinations, there is an increased risk of unintentionally importing harmful organisms and invasive species. Governments respond to increased phytosanitary risks by imposing trade-restricting measures. However, they are under increasing pressure of the private sector and the World Trade Organization to justify costly and trade-restricting phytosanitary policies. On the other side, current phytosanitary policies are required to account for impacts on the environment. This book presents a number of recent scientific developments regarding the economic analysis of impacts that harmful organisms have on agriculture and the environment and of measures to control these organisms. It also contains a number of new approaches that integrate economic and epidemiological modelling and economic approaches for measuring these impacts. **Economics of Poverty, Environment and Natural-Resource Use** Rob B. Dellink, Arjan Ruijs, 2008-03-25. Reduction of poverty is a tremendous and persistent challenge for the global

community. Given that the livelihood of millions is at stake, there is an urgent need to reconsider the causes of and the

remedies for poverty Poverty and its reduction are closely linked to the natural resources base The quality and bounty of the local environment certainly affect living conditions of the poor and their poverty is often seen as a contributing factor to the degraded condition of the local environment Teasing apart the direction of causality in this resource poverty nexus is a serious empirical challenge This book contributes to an improved understanding of the economic dimensions of environmental and natural resource management and poverty alleviation The ten chapters of the book offer an overview of the current knowledge concerning the relation between poverty environment and natural resource use Three sides of the debate receive particular attention First the relation between resource use and poverty is discussed from a theoretical point of view Second it is questioned whether payments for environmental services or considering values of resources can be an effective tool for stimulating both sustainable resource use and poverty alleviation Third alternative strategies to break the land degradation poverty cycle are discussed

Lascano, 2020-01-22 Completely devoted to application of models to optimize the use of limited water and nutrients in various climates this collection will inspire confidence in the capacity of modeling to tackle the biggest threats to secure agriculture To obtain the most production from available water while maintaining natural resources we need whole system based quantitative knowledge and tools to help select appropriate crops and manage water and associated inputs on a site specific basis under changing climate Site specific experimental results are available for limited locations limited periods of time and limited management options Well tested process models of cropping systems can extend field research results to long term weather conditions as well as other climates and soils allowing us to explore

new management options The case studies in this volume are promising examples of these kinds of solutions
