Varicocele Male Infertility Controversies Springerbriefs:

Varicocele and Male Infertility Alaa Hamada, Sandro C. Esteves, Ashok Agarwal, 2015-12-07 This SpringerBrief analyzes varicocele from a novel approach and provides the reader with a comprehensive view of its scientific and clinical significance. The Brief covers all the important aspects of varicocele related to infertility from epidemiology to assisted reproduction techniques, contemplating pathophysiology, semen analysis, specialized sperm function tests, and clinical management, including all available treatment options from three distinct perspectives: i.e. current concepts, consensus, and controversies. Each topic is addressed using the same template, offering the best information from all angles to readers. This SpringerBrief is aimed at both clinicians and scientists involved in the study and care of male and female fertility and is written by a team of three internationally recognized authors with expertise in andrology and male infertility. The text is the first of its kind and presents an invaluable tool both for the basic scientists with an interest in reproductive medicine and for clinicians working in the field of infertility.

Proteomics in Human Reproduction Ashok Agarwal, Luna Samanta, Ricardo P. Bertolla, Damayanthi Durairajanayagam, Paula Intasqui, 2016-12-09 This Brief explores the use of proteomics as a tool for biomarker discovery in human reproduction and summarizes current findings and trends of proteomic studies in both male and female infertility. This simplifies this important but complex topic and equips the novice reader with sufficient background information on the use of proteomics in human reproduction. The up-to-date scenario on proteomic investigations will also appeal to researchers and post-graduate students looking to keep abreast with the latest developments in reproductive research. This review summarizes current findings of contemporary proteomic studies on infertility in both males and females with various reproductive pathologies and its use in predicting the outcome of assisted reproduction. In human reproduction, the search for biomarkers via proteomics is a fast-evolving approach that involves the analysis of proteins in the reproductive tissues and fluids such as the male gametes, seminal plasma, ovarian and endometrial tissue, and follicular and uterine fluid. By comparing the protein profile of a healthy fertile individual against that of an infertile individual, the differentially expressed proteins may give an indication to certain proteins that could serve as useful biomarkers related to infertility. As proteomic studies continue to unravel the dynamic proteome behind various infertility conditions, there is potential for the discovery of prognostic markers that could ultimately help in both natural and assisted human reproduction.

Varicocele and Male Infertility II M. Glezerman,E.W. Jecht,2012-12-06 F H

Comhaire Many diseases were at the beginning merely defined by the description of their clinical appearance Next the pathogenic mechanisms underlying the diseases were recognized Since then the proof of presence of the pathogenic agent or agents has been required to confirm the diagnosis However it sometimes happens that the pathogenic agent can be demonstrated without the disease being clinically evident Confusion arising from this observation may cause endless often purely emotional discussions between believers and non believers Moreover if the disease involves potential disturbance of male fertility the problem is further obscured by the difficulty of defining man s fertility Indeed during the short history of andrology the criteria for judging a man and his ejaculate as potentially fertile or infertile have repeatedly changed Andrological landmarks in general do not hold up for long and some scientists continue to set themselves the task of proving the old definitions invalid Certainly such developments are necessary to make science more exact and to improve medical care However while this research is being done the male partners of barren marriages continue to seek advice and treatment Common sense and an empirical approach in the handling of these cases may result in obviously encouraging results which non believers will ascribe to witchcraft and believers will see as confirmation of their opinions **Varicocele and Male**

Infertility, 2 Ekkehard W. Jecht,1984

Varicocele and Male Infertility E.-W. Jecht,E. Zeitler,2012-12-06

It is not surprising that so much investigation has been undertaken to establish the cause of childlessness especially when the potentia coeundi of the male is not impaired As long ago as 1957 the German Society for the Study of Fertility and Sterility was founded embracing gynecology andrology and veterinary medicine After its inception meetings conducted in the spirit of

its foundation were held every 2 years This interdisciplinary coordinated scientific work in the field of human reproduction achieved its value as a result of the stimuli provided by the permanent involvement of veterinary scientists After about 20 years of activity the Society adopted a highly differentiated pattern of work directions in the field of human and veterinary medicine Since 1976 annual meetings have been held on the topic of animal and human reproduction These meetings have proved of great value especially in the area of comparative medicine and have led to excellent interdisciplinary associations One of the most evident successes was the first extracorporeal fertilization in humans with subsequent embryo transfer and full term pregnancy Gynecologists have found that in 40% of cases the cause of undesired childlessness rests with the male and it is therefore no surprise that also in the field of andrology certain factors concerned with infertility have received great attention

Male Infertility Harris M. Nagler, 2008 This volume is divided into sections highlighting areas of advancement or controversy in the treatment and approach to male factor infertility The introductory section provides updates on hormonal evaluation and male infertility as well as highlights developments and our current understanding of evaluation of male factor infertility the assessment of sperm structure and function and issues related to female fertility The

fundamentals that are required for a urologist to be an effective collaborator with reproductive endocrinologists are also outlined. The second section discusses our understanding of the varicocele, the changing approach of the varicocele, and updates literature regarding the effectiveness of this commonly treated form of male factor infertility. The next section addresses ejaculatory abnormalities. There are many areas of controversy in the therapy of male infertility and these are reviewed related in terms of medical therapy as well as surgical therapy. Articles devoted to genetic foundations provide the urologist with a genetic primer as well as the essentials required to understand the role of genetic abnormalities in male factor infertility. Finally, information on the effect of aging is also presented since as our population ages it happens more frequently that older men are attempting to achieve pregnancies with younger partners.

Treatment of Male Infertility J. Bain, Wolf-Bernhard Schill, L. Schwarzstein, 2012-12-06

Our insight into the mechanisms of the physiology of reproduction has experienced a swift and constant development these last few years. The advent of more sophisticated diagnostic methods and their relatively easy clinical application allow for the incorporation of that knowledge into the evaluation of the infertile couple. These facts together with an obvious change in social psychology have facilitated the development of different specialities dealing with the problems of infertility. It is now possible in medical centers all around the world to undertake a better disposition of the infertile husband to look for advice to be studied and treated. Confronted with this situation we are still unable to offer specific therapy in most cases however empirically based therapy abounds. Advances in therapy have not kept pace with our increased physiological knowledge and improved diagnostic techniques. Pathophysiological mechanisms and etiological factors in male infertility are largely unknown. This has significantly hampered both clinical evaluation and advances in treatment allowing for frequent non scientific therapeutic incursions into the armamentarium of the andrologist. Several factors have given birth to therapeutic fashions which are bound to survive as long as this state of lack of knowledge continues. For example we may ask whether the treatment of varicocele constitutes a fashion. Though we accept the treatment of varicocele as the best available treatment of male infertility we do not know its mechanism of action and so we cannot predict a therapeutic result.

consulted *Male Infertility* T.B. Hargreave, 2012-12-06 Twenty five years ago the subject of male infertility scarcely existed in urological practice At that time semen analysis was a rather cursory microscopic test the scope of endocrine and hormone tests was limited and debate about the relevance of a varicocele was only just beginning Since then progress has owed about as much to sociological change as medical progress Acceptance that problems of fertility should be shared between partners is now no longer questioned and the willingness of both husband and wife to recognise this and to seek help has been an important change in clinical practice This book is concerned primarily with male infertility and it will be evident that this is now a substantial subject in its own right However a need for a broad prospective in this subject is emphasised by a chapter on female assessment as well as reference to female aspects of infertility wherever relevant so that the reader remains properly aware that this subject is a problem for the couple Because our knowledge of this subject is changing so rapidly Mr Hargreave has separated the contents into two parts The first is concerned with basic biological problems and investigations with a full evaluation of current knowledge and methods Also details of new techniques that offer the prospect of real progress are a special attraction in this section
