STUDY GUIDE: TISSUES

After understanding the basic structures of and mechanisms that keep the integrity of cells, you are now ready to look at groups of similar cells – the TISSUES.

After studying tissues using this guide, you are expected to:

1. *describe the general makeup of a tissue;*
2. *explain the general characteristics of each tissue type;*
3. *describe the various types of epithelial, connective, muscular and nervous tissues, including their functions and locations;*
4. *identify the different tissue types in the photomicrographs; and*
5. *explain interrelationships among tissue functions in each organ.*

Additionally, after the synchronous learning activity that will follow, you are expected to identify anatomic and physiologic deviations from normal, given a hypothetical clinical condition.
