Simply stated to reach a Six Sigma level of performance means that you have a goal to reduce defects to 3.4 parts per million

Achieving this goal can only be accomplished through the breakthrough reduction of process variation and maintaining strict control standards. Combining Six Sigma levels of improvement with effective team skills has provided vast advances in many organizations. The fundamental objective of Juran's Six Sigma Transactional curriculum is to develop a methodology and strategy that enables individuals and organizations to successfully improve processes and reduce variation. At a project level, the Six Sigma DMAIC process (Define, Measure, Analyze, Improve, and Control) is an improvement system for existing processes falling below specification and provides methods for obtaining breakthrough improvement. Green Belts identify and resolve chronic problems using the Six Sigma toolkit, including graphical analysis tools. They are active participants and team members working in the process being improved. Green Belts can also be autonomous team leaders and work as subject matter experts who help project teams from time to time, sharing their specialized knowledge. Topics covered in Six Sigma Green Belt Volume 2 Transactional are: Analyze, Stratification of Data, An Introduction to Hypothesis Testing, Confidence Intervals, Testing Hypotheses When Y is Categorical and X is Categorical, Normality Testing, Testing for Equal Variances, Testing Hypotheses When Y is Continuous and X is Categorical, Analysis of Variance, Nonparametric Tests, Testing Hypotheses When Y is Continuous and X is Continuous, Improve, Prove Effectiveness, Control, Mistake Proofing, Statistical Process Control, Methods, Documentation, and Replication.
