Methods for Risk Assessment of Transgenic Plants Gösta Kjellsson, Vibeke Simonsen, Klaus Ammann, 2012-12-06 The present work is a continuation of the work initiated in Autumn 1991 which resulted in the book published by Birkhauser Verlag in 1994 entitled Methods for Risk Assessment of Transgenic Plants I Competition Establishment and Ecosystem Effects Already when the work on volume 1 started it was obvious to the authors that not only the physical establishment of a transgenic plant outside the cultivated area was important for risk assessment but also the possible gene transfer from transgenic plants to other plants had to be considered It was then decided to write a second volume on test methods as a complement to the first covering the main topics Pollination gene transfer and population impacts The main user groups for this volume are scientists and students working with plant population genetics and risk assessment and administrators with responsibility for legislation of transgenic plants In order to cover such a broad range of topics specialist knowledge was required Therefore colleagues in Denmark and Switzerland working in these fields in relation to the concerns of using transgenic plants were asked to participate The result was a Danish Swiss cooperation A list of contributors to the book and their addresses is shown on p VII Financial support which made the work possible was given by The National Environmental Research Institute Denmark the Federal Office of Environment Forest and Landscape Switzerland the National Forest and Nature Agency Denmark the Danish Environmental Protection Agency and the European Commission DC XI

Genomics of Tropical Crop Plants Paul H. Moore, Ray Ming, 2008-01-03 For a long time there has been a critical need for a book to assess the genomics of tropical plant species At last here it is This brilliant book covers recent progress on genome research in tropical crop plants including the development of molecular markers and many more subjects The first section provides information on crops relevant to tropical agriculture The book then moves on to lay out summaries of genomic research for the most important tropical crop plant species

Eat Your Genes Stephen Nottingham, 2003-04 Food safety scares such as salmonella in eggs or BSE in beef continue to cause public concern but far more unnoticed is the way that genetically engineered food is entering our

diet This book looks at how this situation came about revealing those responsible for driving genetically modified foods so rapidly on to the market Stephen Nottingham argues that consumer pressure could decide whether these new products succeed or fail His book gives us the facts what these new foods are how they are produced why they remain unlabelled and how they are arriving on our plates unannounced Never before has science been likely to have quite such a huge impact on our lives after all we are what we eat Here is an issue every thinking person needs to apply their mind to This is the book to help you do it
