Transitional Areas Between Internal Medicine And Cardiovascular Disease:

Transitional Areas Between Internal Medicine and Cardiovascular Disease W. D. Reitsma, 1995 *Medical Care in Transition*, 1964 **Technology and the American Economic Transition**, 1988 **Clinical management of cardiac ventricular arrhythmias: Mapping and ablation** Feifan Ouyang, Tom Wong, Minglong Chen, Kyoung-Ryul Julian Chun, Andreas Metzner, 2023-03-01 **Infections, Chronic Disease, and the Epidemiological Transition** Alex Mercer, 2014 In 1949 the U S National Cancer Institute NCI and the Canadian Department of National Health and Welfare DNHW commissioned a film eventually called Challenge Science Against Cancer as part of a major effort to recruit young scientists into cancer research Both organizations feared that poor recruitment would stifle the development of the field at a time when funding for research was growing dramatically The fear was that there would not be enough new young scientists to meet the demand and that the shortfall would undermine cancer research and the hopes invested in it Challenge aimed to persuade young scientists to think of cancer research as a career This book is the story of that forgotten film and what it tells us about mid twentieth century American and Canadian cancer research educational filmmaking and health education campaigns It explores why Canadian and American health agencies turned to film to address the problem of scientist recruitment how filmmakers turned such recruitment concerns into something they thought would work as a film and how information officers at the NCI and DNHW sought to shape the impact of Challenge by embedding it in a broader educational and propaganda program It is in short an account of the important but hitherto undocumented roles of filmmakers and information officers in the promotion of post Second World War cancer research Capitalizing on the Demographic Transition, 2011-06-02 Increasing life expectancy in South Asia is resulting in a demographic transition that can under the right circumstances yield dividends through more favorable dependency ratios for a time With aging the disease burden shifts toward noncommunicable diseases NCDs which can threaten healthy aging However securing the gains expected from the demographic dividend where developing countries working and nondependent population increases and per capita income thus rises is both achievable and affordable through efficiently tackling NCDs with prevention and control efforts This book looks primarily at cardiovascular disease CVD and tobacco use since they account for a disproportionate amount of the NCD burden the focus is strategic rather than comprehensive The goal of this book is to encourage countries to develop adopt and implement effective and timely country and where appropriate regional responses that reduce both population level risk factors and the NCD burden The work develops i an NCD burden and risk factor profile for all countries and the region as a whole ii a rationale for public policy and action for NCDs iii a framework to guide the formulation of public policies and strategies for NCDs iv a country profile including capacity and ongoing NCD activities as well as policy options and actions for NCDs that will help stimulate policy dialogue within and among countries and v a regional strategy for NCD prevention and control where regional collaboration offers added value The achievements of this book are i developing a

framework for policy options to identify key areas for strategic country and regional level policy and actions ii bringing together demographic and aging trends disease and risk factor burden data alongside analyses of capacities and accomplishments to tackle NCDs and iii using these inputs to develop policy options for country and regional strategies
