Transportation Decision Making Principles Of Project Evaluation And Programming:

Transportation Decision Making Kumares C. Sinha, Samuel Labi, 2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation; estimating travel demand and costing transportation projects; Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs; Evaluating a project's impact on economic development and land use as well as its impact on society and culture; Assessing a project's environmental impact including air quality, noise, ecology, water resources, and aesthetics; Evaluating alternative projects on the basis of multiple performance criteria; Programming transportation investments so that resources can be optimally allocated to meet facility specific and system wide goals. Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decisionmaking. Given that billions of dollars are spent each year on transportation systems in the United States alone and that there is a need for thorough and rational evaluation and decision making for cost effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation. **Reliable**

Decision-Making for Sustainable Transportation Gholamreza Haseli, Mostafa Hajiaghahi-Keshteli, Sarbast Moslem, 2025-08-22 Reliable Decision Making for Sustainable Transportation explores decision making methods that incorporate expert and decision maker opinions for improved reliability. The book examines fuzzy sets that capture ambiguity and enable a more comprehensive analysis of stakeholder perspectives focusing on transportation case studies to demonstrate techniques for weighing criteria, ranking alternatives, and selecting optimal and reliable decisions. It seeks to advance transportation planning, traffic engineering, road safety, and sustainability by integrating state of the art decision support systems that leverage AI and multiple stakeholder viewpoints. On the Road to Economic Prosperity Tuan Anh Luong, Zenas Azuma, 2022-11-03 This Element investigates how the Ghanaian household wealth index is impacted by travel time reduction which is a direct effect of infrastructural investments from 2000 to 2016 The wealth index is constructed based on the possession of selected assets and reflects the well being of residents in Ghana The Element employs two datasets the Demographic and Health Survey DHS and the DHS Covariates The two stage least square estimation is implemented to establish the causal relationship The Element finds that a ten percent reduction in travel time from 2000 to 2015 would result in a 1.2 percent increase in the wealth index from 2003 to 2016 This finding is robust to various settings including the addition of more control variables the use of different instrumental variables and the study of both short term and long term effects The analysis lends support to the Ghanaian government's current economic and infrastructure development plans

Economic Impacts of Intelligent Transportation Systems E Bekiaris,Y J Nakanishi,2004-07-24 There are unique complexities associated with the economic valuation of Intelligent Transportation Systems ITS and telematics Traditional methods of quantitative analysis may not be appropriate in accurately and reliably assessing the economic impacts of these technologies Although advanced transportation and related technologies are being planned and deployed at an increasingly rapid pace many of the technologies are still relatively new and their use may not be widespread Much of the initial information and statistics gathered have been anecdotal and have focused more on benefits rather than costs Therefore difficulties arise due to the lack of historical data and lessons learned from which to draw upon In addition compared with traditional transportation infrastructure ITS technologies have different life cycles cost structures and a number of interrelated elements This book addresses these concerns and proposes new economic assessment techniques as well as modifications to existing ones Included are case studies from a multitude of North American European and Asian nations and major metropolitan areas covering a wide range of ITS technologies including freeway management electronic toll collection advanced driver assistance systems and traveller information systems

The Oxford Handbook of Urban Economics and Planning Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2011-02-01 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap this book highlights the best scholarship in planning and economics that addresses the most pressing urban problems of our day and will stimulate further dialog between scholars in urban planning and urban economics
