Mathematical Geosciences Joseph L. Awange, Béla Paláncz, Robert H. Lewis, Lajos Völgyesi, 2023-04-07 This second edition of *Mathematical Geosciences* book adds five new topics Solution equations with uncertainty which proposes two novel methods for solving nonlinear geodetic equations as stochastic variables when the parameters of these equations have uncertainty characterized by probability distribution The first method an algebraic technique partly employs symbolic computations and is applicable to polynomial systems having different uncertainty distributions of the parameters The second method a numerical technique uses stochastic differential equation in its form Nature Inspired Global Optimization where Meta heuristic algorithms are based on natural phenomenon such as Particle Swarm Optimization This approach simulates e.g. schools of fish or flocks of birds and is extended through discussion of geodetic applications Black Hole Algorithm which is based on the black hole phenomena is added and a new variant of the algorithm code is introduced and illustrated based on examples The application of the Gröbner Basis to integer programming based on numeric symbolic computation is introduced and illustrated by solving some standard problems An extension of the applications of integer programming solving phase ambiguity in Global Navigation Satellite Systems GNSSs is considered as a global quadratic mixed integer programming task which can be transformed into a pure integer problem with a given digit of accuracy Three alternative algorithms are suggested two of which are based on local and global linearization via McCormick Envelopes and Machine learning techniques MLT that offer effective tools for stochastic process modelling The Stochastic Modelling section is extended by the stochastic modelling via MLT and their effectiveness is compared with that of the modelling via stochastic differential equations SDE Mixing MLT with SDE also known as frequently Neural Differential Equations is also introduced and illustrated by an image classification via a regression problem

Quantum Mechanics H. Thomas Williams, 2015-12-01 After a quarter century of discoveries that rattled the foundations of classical mechanics and electrodynamics the year 1926 saw the publication of two works intended to provide a theoretical structure to support new quantum explanations of the subatomic world Heisenberg's matrix mechanics and Schrodinger's wave mechanics provided compatible but mathematically disparate ways of unifying the discoveries of Planck Einstein Bohr and many others Efforts began immediately to prove the equivalence of these two structures culminated successfully by John von Neumann's 1932 volume Mathematical Foundations of Quantum Mechanics This forms the springboard for the current effort We begin with a presentation of a minimal set of von Neumann postulates while introducing language and notation to facilitate subsequent discussion of quantum calculations based in finite dimensional Hilbert spaces Chapters which follow address two state quantum systems with spin one half as the primary example entanglement of multiple two state systems quantum angular momentum theory and quantum approaches to statistical mechanics A concluding chapter gives an overview of issues associated with quantum mechanics in continuous infinite dimensional Hilbert spaces
