Transfer Learning for Harmful Content Detection Salar Mohtaj,2025-09-26 This book provides an in depth exploration of the effectiveness of transfer learning approaches in detecting deceptive content i e fake news and inappropriate content i e hate speech The author first addresses the issue of insufficient labeled data by reusing knowledge gained from other natural language processing NLP tasks such as language modeling He goes on to observe the connection between harmful content and emotional signals in text after emotional cues were integrated into the classification models to evaluate their impact on model performance Additionally since pre processing plays an essential role in NLP tasks by enriching raw data especially critical for tasks with limited data such as fake news detection the book analyzes various pre processing strategies in a transfer learning context to enhance the detection of fake stories online Optimal settings for transferring knowledge from pre trained models across subtasks including claim extraction and check worthiness assessment are also investigated The author shows that the findings indicate that incorporating these features into check worthy claim models can improve overall model performance though integrating emotional signals did not significantly affect classifier results Finally the experiments highlight the importance of pre processing for enhancing input text particularly in social media contexts where content is often ambiguous and lacks context leading to notable performance improvements
