Transport and Thermal Properties of f-Electron Systems H. Fujii, T. Fujita, G. Oomi, 2012-12-06 The Hiroshima Workshop on Transport and Thermal Properties of f Electron Systems T2Pfs was held in the hotel Greenpia Yasuura on the shores of the Seto Inland Sea near Hiroshima Japan from August 30 to September 2 1992 as a satellite meeting of the International Conference of Strongly Correlated Electron Systems in Sendai The purpose of this workshop was to bring together those scientists who are actively involved in the research of 4f and 5f electron systems particularly the transport and thermal properties such as electrical resistivity Hall effect thermoelectric power thermal conductivity thermal expansion and specific heat Hence the organizing committee limited the number of participants to 60 25 from abroad and 35 from Japan In the workshop all the sessions consisted of oral presentations 25 invited talks and 5 contributed talks including at least 10 minutes of discussion for each presentation The program was divided into the following five topics 1 Kondo lattice semiconductors 2 superconductivity of f electron systems 3 anomalous transport and thermal properties of 4f and 5f compounds 4 low carrier heavy electron systems and 5 theoretical investigation of heavy electron and mixed valence states This division of topics has been retained in the organization of papers in this volume Almost all of the invited and contributed papers are included These papers include excellent reviews of both the recent advances and historical background of each topic We believe this book would be a tutorial text for researchers working in the field of solid state physics

Crystalline Electric Field and Structural Effects in f-Electron Systems Jack E. Crow, 2012-12-06 Perhaps the title of this conference Crystalline Electric Field and Structural

Effects in f Electron Systems reflects best the growth and direction of the field The title and the conference itself go beyond CEF in two broad and important respects First the inter relations between CEF and mode softening distortions due to quadrupolar ordering or the Jahn Teller effect have gained greater focus hence the inclusion of Structural Effects Second much greater emphasis on the actinides and in particular comparisons between actinides and the lighter rare earths is seen in this conference hence the more general terminology f Electron Systems It seems clear that this comparison will lead to an extension to the actinides of mixed valence and Kondo considerations as well as CEF effects The emergence of a broader discipline which includes all f electron systems and which is concerned with unstable as well as stable valence reflects the maturation of the field and a coming to grips with the complexity as well as the unity of f electron systems This maturation is also seen in the growing realization of the effects of CEF on transport thermodynamic properties and superconductivity and its co existence with magnetic order This volume contains 63 articles all but two of which were presented at the Conference held in Philadelphia U S A on 12 15 November 1979 About 100 conferees from 13 countries attended the meeting which consisted of four full days of lecture presentations *Energy Research Abstracts* ,1992 **Physics Briefs** ,1994 **Lead Chalcogenides** D.
