Treasures Hidden Within The Empire Martin Concoyle:

Treasures Hidden Within the Empire Martin Concoyle, 2014-10-25 This book is about a fundamental re organization of language which is used in regard to describing the stable many but few body spectral orbital systems from nuclei to planetary systems which now have no valid descriptions based on what are called the laws of physics The current description based on partial differential equations results in non linear non commutative and an improperly identified and improperly used random basis for physical description The result is that the properties of stability which are observed for these systems have not been describable in such a context On the other hand the already identified math patterns of geometrization along with E Noethers symmetries which allow the stable set of discrete hyperbolic shapes to be identified with energy spaces as well as the many dimensional structure in which these stable shapes of any size are defined as identified by D Coxeter are patterns which can be used to form a new context for physical description This is what this book is about forming such a new context wherein the stable many but few body spectral system is formulated and accurately described ie it is solved In such a new context partial differential equations come to play a subordinate role to stable shapes and their relation to defining a finite stable spectral set which is a property of the new many dimensional containment set a property which determines which stable patterns can exist But there are many social forces which oppose such a discussion These opposing social forces are also discussed t
