Emerging Commercial Mobile Wireless Technology and Standards Phillip M. Feldman,1998 The U S Army as well as the other services is moving in the direction of greater use of commercial technology and standards The principal motivation for this change is the desire to reduce costs However increased interoperability is another potential benefit This report evaluates commercial wireless communications technology including components and subsystems physical layer standards waveforms and signal processing protocol standards and products and services The author attempts to assess the suitability of these commercial technologies for Army tactical applications and to suggest the appropriate mix of commercial military unique and military variants of commercial systems for use on the digital battlefield The author recommends specific Army research and

development areas where progress is needed in order to address voids between military requirements and currently available and emerging technology **Analytical Modeling of Medium Access Control Protocols in Wireless Networks** Marcelo Menezes Carvalho, 2006 A new modeling framework is introduced for the analytical study of medium access control MAC protocols operating in multihop wireless ad hoc networks i e wireless networks characterized by the lack of any pre existent infrastructure and where participating devices must cooperatively provide the basic functionalities that are common to any computer network The proposed modeling framework focuses on the interactions between the physical PHY and MAC layers and on the impact that each node has on the dynamics of every other node in the network To account for the effects of both cross layer interactions and the interference among all nodes a novel linear model is introduced with which topology and PHY MAC layer aspects are naturally incorporated in what we define as interference matrices A key feature of the model is that nodes can be modeled individually i e it allows a per node setup of many layer specific parameters Moreover no spatial probability distribution or special arrangement of nodes is assumed the model allows the computation of individual per node performance metrics for any given network topology and radio channel model *Forthcoming Books* Rose Arny, 2003
