Tobbell, 2022-12-28 An analysis of the efforts of American nurses to establish nursing as an academic discipline and nurses as valued researchers in the decades after World War II Nurses represent the largest segment of the US health care workforce and spend significantly more time with patients than any other member of the health care team *Dr Nurse* probes their history to examine major changes that have taken place in American health care in the second half of the twentieth century The book examines the major changes in nursing education and the place of nursing in the post war research university revealing how federal and state health and higher education policies shaped education within health professions after World War II Starting in the 1950s academic nurses sought to construct a science of nursing distinct from that of the related biomedical or behavioral sciences that would provide the basis of nursing practice Facing broad changes in patient care driven by the introduction of new medical innovations they worked both to develop science based nursing practice and to secure their roles within the post war research university By their efforts academic nurses transformed nursing's labor into a valuable site of knowledge production and demonstrated how the application of this knowledge was integral to improving patient outcomes and healthcare delivery Exploring the knowledge claims strategies and politics involved as academic nurses negotiated their roles and nursing's future *Dr Nurse* reveals how state supported health centers have profoundly shaped nursing education and health care delivery

Arguing with Numbers James Wynn, G. Mitchell Reyes, 2021-04-15 As discrete fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics explains or describes the phenomena it studies with certainty persuasion is not needed This volume calls into question the view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines *Arguing with Numbers* shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based arguments in public policy political and economic theory and even literature the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another *Arguing with Numbers* provides inspiration to students established scholars and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two disciplines In addition to the editors the contributors to this volume are Catherine Chaput Crystal Broch Colombini Nathan Crick Michael Dreher Jeanne Fahnestock Andrew C Jones Joseph Little and Edward Schiappa
